

Final Design and Analysis Report

Team Number: 10

Team Members:

- Aakash Singh (63260442)
- Alexander Argatoff (87604641)
- Beichun Gu (15805476)
- Du Pyo Park (51886159)
- Mandeep Singh (72040231)
- Seiya Iwama (91173278)

Client:

- Chad Davis (UBCO CMPS professor)
-

Overview

Description:

The purpose of this software is to create a centralized, responsive web application that streamlines the TA allocation process at UBCO. It allows TA coordinators, instructors, and students to manage TA applications, course requirements, and assignments (TA allocations) all in one place, replacing traditional, fragmented tools like email and spreadsheets.

The current TA allocation process is inefficient, time-consuming, and prone to miscommunication due to manual coordination via email and disconnected tools. Our system addresses this by:

- Providing a structured platform for TA applications, instructor requests, and TA assignments
- Supporting schedule matching and CSV uploads for faster data handling

- Giving stakeholders a clear view of who is assigned to what, based on preferences, lab skills (qualifications), and unavailabilities.

UVP:

The TA-Portal offers a tailored solution specifically designed for UBCO's TA allocation process, combining visual scheduling, application tracking, and role-based access into one unified platform. Unlike generic scheduling tools or manual email-based coordination, our system streamlines the entire workflow by allowing coordinators to manage TA assignments, instructors to submit course needs (TA requirements), and students to apply with preferences and availability, all through a secure, user-friendly interface. With features like automated conflict detection, CSV imports, email notifications, and real-time status updates, the TA-Portal ensures transparency, efficiency, and accuracy in TA management.

User Groups:

- Student
 - Needs a platform in which the student can permanently save personal details without having to redo the same action every year.
 - Needs a platform in which the student can conveniently understand his application and allocation status, along with their details.
 - Needs a platform in which the student is confident that he or she has provided all the coordinator's desired information such as exam availability, weekly unavailabilities, lab skills (qualifications), and other personal details.
- Instructor
 - Needs a platform in which the instructor can permanently save his or her course needs (TA requirements) for that year and semester.
 - Needs a platform in which the instructor can provide his or her lab skill (qualification) requirements for a course.
 - Needs a platform in which the instructor can view the TA allocations of the courses (sections) that he or she is teaching.
- Coordinator
 - Needs a platform in which the coordinator can efficiently allocate TAs using a scheduler with all the desired information conveniently and readily available.
 - Needs a platform in which the coordinator can view an organized collection of all applications, allocations, user information, course information and more.

User Requirements:

General User:

- Must be able to register, log in, and manage their account (inc password recovery)

TA Coordinator:

- Must be able to create/edit/view academic terms and course offerings.
- Must be able to assign instructors to courses.
- Must be able to review instructor-submitted TA needs.
- Must be able to view and manage student applications.
- Must be able to assign students to courses/labs manually.
- Must be able to view conflicts when scheduling students.
- Must be able to view a calendar-based interface showing all TA assignments.
- Must be able to view student weekly unavailability schedules during the allocation process.
- Must be able to view assignment totals per course/per TA.
- Must be able to export reports (CSV, PDF) and view analytics (e.g., unmet requests, total hours).
- Must be able to import previous year allocations
- Must be able to perform a bulk upload of course schedule for a term/assigned
- Must be able to see archived terms and data must remain accessible for reference.
- *Additional Requirement:* Must be able to create a questionnaire that the student can permanently save answers for.
- *Additional Requirement:* Must be able to revoke an offer that is already sent to the student.
- *Additional Requirement:* Must be able to save assignments (allocations) by three types of hours for the student: grading, lab-prep, and section (TA).
- *Additional Requirement:* Must be able to filter and view all transcripts

Instructor:

- Must be able to view their assigned courses each term.
- Must be able to submit TA skills requests for each course, including:

- Required qualifications (previous courses/skills)
 - Lab/tutorial skills needs
- Must be able to view assigned TAs once allocation is finalized per course.
- Must receive system notifications (e.g., deadline reminders, final allocation notice).

Student:

- Must be able to build a profile with:
 - Previous TA experience
 - Skills/qualifications
 - Course preferences
 - Update profile with previous experience
- Must be able to apply to with ranked preferences (see previous CMPS intake form)
 - Top three domain areas
 - Unavailability for term
 - Type of application (UTA/GTA)
- Must be able to specify and update weekly unavailability (e.g., Mon 9–11, Wed 2– 4) in a calendar view.
- Must be able to view submitted applications and their status.
- Must be able to view final assignments in a calendar view (lab, marking, prep, coordination)
 - GTA must be able to see their exam assignments.
- Should receive notifications on key events (e.g., application accepted, deadline approaching).
- For GTA, must be able to specify availability during final exam periods
- *Additional Requirement:* Must be able to specify the number of hours the student wants to work.
- *Additional Requirement:* Must be able to specify whether the student wants to work in person or remote.
- *Additional Requirement:* Must be able to upload a transcript.
- *Additional Requirement:* Must be able to fill out a questionnaire about personal details that is saved as part of the student's profile.

Technical Requirements:

- The system hashes all passwords using strong algorithms before storing them in the database (e.g., SHA256).
- The system uses JWTs for web authentication.
- The system allows filtering and keyword search for courses using dynamic UI elements like dropdowns and search bars.
- The system implements a weekly planner application, which is used by the student/coordinator, by importing a third party library.
- The system will be built and run using Docker for easy portability for development and eventual deployment
- The system will have an email mailer for notifications and communication
- The system uses a RESTful API for CRUD operations and business logic.
- The system uses a relational database Management System, MySQL.
- The system uses a JDBC driver to connect the java application to the database.

Non-Functional Requirements:

Organizational Requirements:

- The system must meet all specifications and constraints defined in the Canvas project description.
- Codebase must be submitted via GitHub with appropriate documentation and usage instructions.

External requirements:

- Legislative:
 - The system must respect copyright laws by not including or copying proprietary content or software unless permitted.
 - Any reused code or open-source components must follow their licensing conditions (e.g., MIT, GPL).
 - The platform must comply with institutional data privacy rules, ensuring no unauthorized data sharing.
- Security:

- The system must not disclose any personal information about the user apart from what they accepted to be public.

Product Requirements:

- Reliability:
 - When the system crashes, the data should still be the same. It is ACID compliant. Should either rollback or be left in the state it was. Atomic, concurrency, isolated, durable.
- Portability:
 - The system will use a design library like Tailwind to make the website responsive to the size of the screen.
- Performance:
 - The system cannot take more than 5 seconds to respond to a query.
 - Weekly planner and application matching logic should complete within 5 seconds per query.
- Space:
 - The system must efficiently store data with indexing for faster queries and limited redundancy.
- Security:
 - The system must ensure that users' personal data is protected and only visible to authorized roles.
 - All communication must be encrypted using HTTPS (TLS).
 - Passwords must be stored using strong hashing algorithms.

Interoperability:

- The system must be built using Docker for easy deployment.
- The system must accept CSV file uploads for student transcripts and course data.
- Reports and summaries must be exportable in PDF and CSV formats.
- External email services (e.g., SMTP) must be supported for sending notifications.

Functional Requirements:

Authentication and Role Management:

- The system must support secure username/password login.
- The system must enforce role-based access control (Admin, TA Coordinator, Instructor, Student).
- The system must allow admins to be able to manage all users and assign roles.

Term and Course Management:

- The system will allow archived terms and data to remain accessible for reference.
- The system will store all courses in any year and semester to be viewed.
- The system will allow deletion, updating, and creation of all course and section information.
- The system will allow bulk upload of course/section information through CSV.

Instructor Features:

- The system will present TAs viable per course based on skills/previous coursework/previous assignments to coordinators.
- *Additional Requirement:* The system will make instructors' saved information such as course needs displayed on their profile and visible to coordinators.

Student Features:

- The system will be using a visual scheduling interface when setting unavailabilities and setting exam availabilities.
- The system will allow students to submit ranked course applications.
- The system will allow students to view calendar-based summaries of their final TA Assignments.
- *Additional Requirement:* The system will make unavailability data accessible to TA Coordinators during the allocation process.
- *Additional Requirement:* The system will make students' saved information such as questionnaire answers and lab skills displayed on their profile and visible to coordinators.
-

TA Allocation and Coordination:

- The system will allow TA Coordinators to view all assignments in a calendar view, showing conflicts and hours per student.
- The system must alert TA Coordinators to conflicts by overlapping sections and unavailabilities.
- The system logs all assignments and edits.

- *Additional Requirement:* The system displays supporting information such as the student's allocation history, the section's details, the number of TAs assigned to the section so far, and the instructor's needs (TA requirements) for a section.
- *Additional Requirement:* The system does not make lab skills (qualifications) an obstacle to allocating a student. The system makes it optional.

Reporting and Analytics:

- The system must generate reports (PDF, CSV) for:
 - Course-wise allocations
 - Student assignments
 - Total hours requested vs. assigned
- The system makes summary dashboards show key metrics (e.g., unfilled courses, overbooked students).
- The system makes calendar views support filtering by student, and course.

Usability and UX:

- The system's interface must be desktop-first, but responsive.
- The system's calendar views must use intuitive drag/drop or block-based time selection (where applicable).

Security and Maintainability:

- The system hashes all passwords using industry best practices.
- The system validates user data server-side to prevent injection or corruption.
- The system must maintain an audit log of key actions (assignments, overrides).
- The system's backend must be modular and maintainable; database schema should allow for extensibility (e.g., feedback, satisfaction metrics in future terms).

Listed requirements but unimplemented:

- The system must include help popups.
- The system audits logins.
- The system's calendar views support filtering by time window.
- The system alerts coordinators to conflicts by overlapping assignments (allocations).
- *Additional Requirement:* The system uses HTTPS to ensure all communication between client and server has encryption of data in transit.

- *Additional Requirement:* Students must be able to manually input the courses the student has completed.
- *Additional Requirement:* The system will allow students to bulk upload their CSV information concerning the courses they have taken.

System Architecture

Tech Stack:

Spring Boot: It is a popular and stable framework for building RESTful API's with a lot of documentation and resources. Plus it's in Java which we all know. It has easy build tools with Maven, and a number of packages for security, database access, RESTful endpoints, dependency injection, and object management. It limits the use of XML, so the application winds up being pure Java aside from a few dependency XML files. Since it's in Java, its power consumption and speed are good when compared to less efficient languages like Python or PHP.

React: It is a popular and stable framework. It has reusable components that can be used for less code duplication. It allows the developer to write HTML inside Typescript functions for an improved development experience. It has a huge collection of third-party libraries. It is the most popular framework used and has a huge amount of documentation, resources, and general help in building applications. It has enough speed for this application's purposes. Moreover, we will be using Vite to set up React quickly.

Tailwind CSS: Tailwind is a utility-first CSS framework that allows developers to style elements directly within HTML classes. It helps build responsive and consistent UIs quickly without writing custom CSS. Tailwind is lightweight, customizable, and popular for clean, maintainable styling.

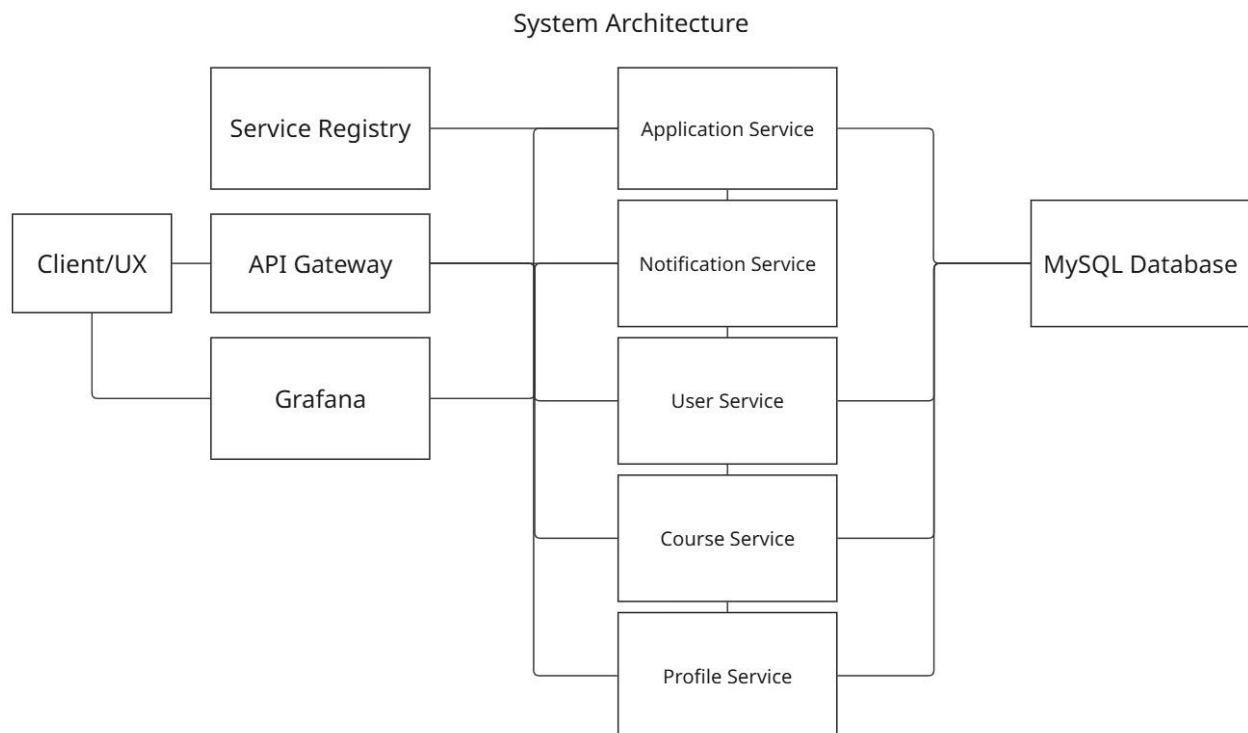

MySQL: Our data is relational, we need a relational database, and MySQL is something we all know. Relational database management system known for its speed, reliability, and ease of use. In our case, storing user profiles, course information, and TA assignments. It has a GPL license, and we are okay using that same license in our own software.

JDBC: It is the standard Java API for connecting and interacting with relational databases. It allows our application to execute SQL queries, retrieve results, and manage database connections directly from Java code. JDBC is fast and gives us fine-grained control over how we handle database operations, which is ideal for applications where performance and efficiency matter.

Docker: We will use Docker to containerize both backend and frontend components of our application, along with MySQL database. Managing with docker compose, we will ensure that applications can be set up and run consistently on any deployment environment.

Maven: It is a widely-used and stable build automation tool specifically designed for Java projects. It simplifies dependency management through its pom.xml file, allowing us to easily include libraries like Spring Boot and SQL drivers without manually downloading JAR files. Maven also streamlines the project structure, packaging, testing, and deployment processes with standard conventions. It integrates well with IDEs like IntelliJ and Eclipse, making development smoother.

System Architecture:

Major components of the system and their operations:

application-service

- The service is a backend service that processes information about TA allocations, applications, global configurations such as deadlines.
- For allocations, the service allocates, deallocates, updates confirmation status, imports allocation history, and more.
- For applications, the service submits an application, updates applications, saves students' unavailabilities, and more.

- For global configurations, the service updates deadlines for applications and instructors' course needs (TA requirements) submissions.
- The service is connected to user-service because applications and allocations require user details when sending information to the client.
- The service is connected to course-service because of operations such as importing Allocations via CSV, updating the number of TAs allocated to a section, and updating the number of hours allocated to a section.
- The service is connected to notification-service because an email is sent to the TA when the TA is allocated.

course-service

- The service is a backend service that processes information about courses, sections, exams, instructor's course needs (TA requirements), lab skills (qualifications), and student's enrollments.
- For courses and sections, the service includes creation of schedules for each section, exporting all the section information as CSV, creating courses and sections via CSV, and more.
- For exams, the service includes the availabilities of students for the exam, and more.
- The service is connected to the user-service for operations such as assigning an instructor to a section.

user-service

- The service is a backend service that processes authentication and authorization, registrations, logins, and more.
- The service is connected to other domain services because other services often require user details for logging and auditing and sending to the client additional user information in one response.

profile-service

- The service is a backend service that processes questionnaire information and saves students' transcripts.

notification-service

- The service has no database queries and sends emails.

MySQL Database

- There are four databases, one for each of: application-service, course-service, user-service, and profile-service.

Service Registry

- The service registry provides service registration and discovery capabilities.
- The service registry helps other microservices dynamically discover other domain services within the system.

Grafana

- Grafana is accessed by only the admin. The admin can enter Grafana and monitor the microservices via actuator. Grafana offers advanced visualization such as graphs to display information.

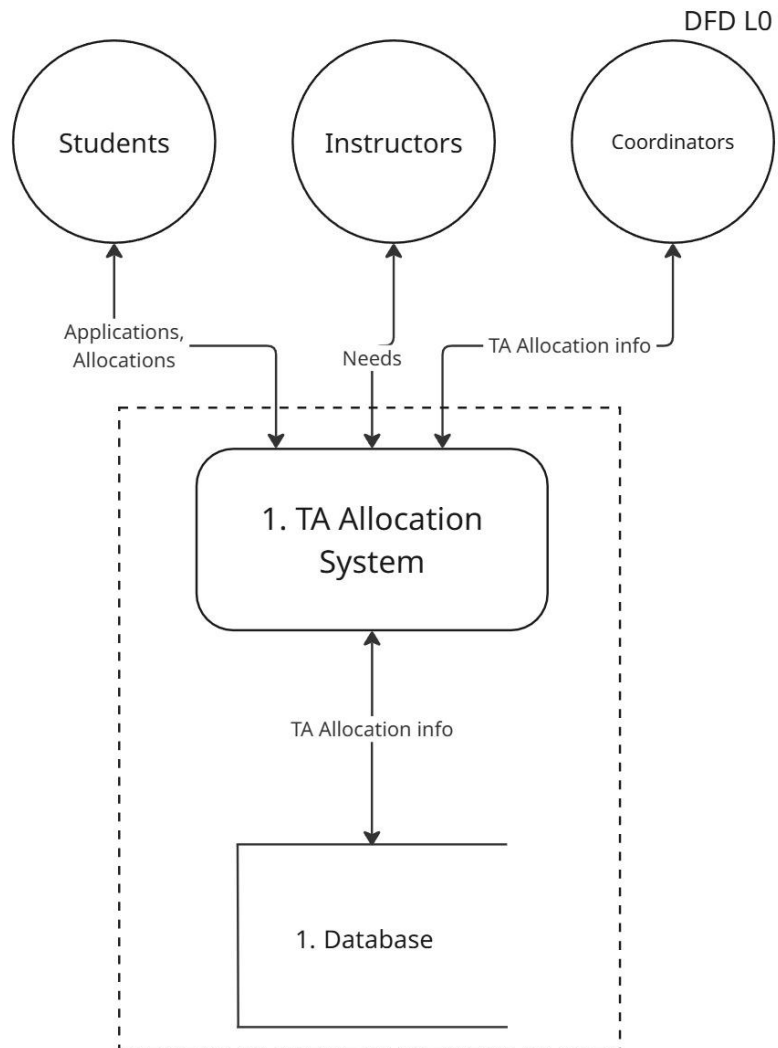

API Gateway

- The client accesses the backend via port 8080, which is the API gateway. All the microservices can be accessed through this reverse proxy.

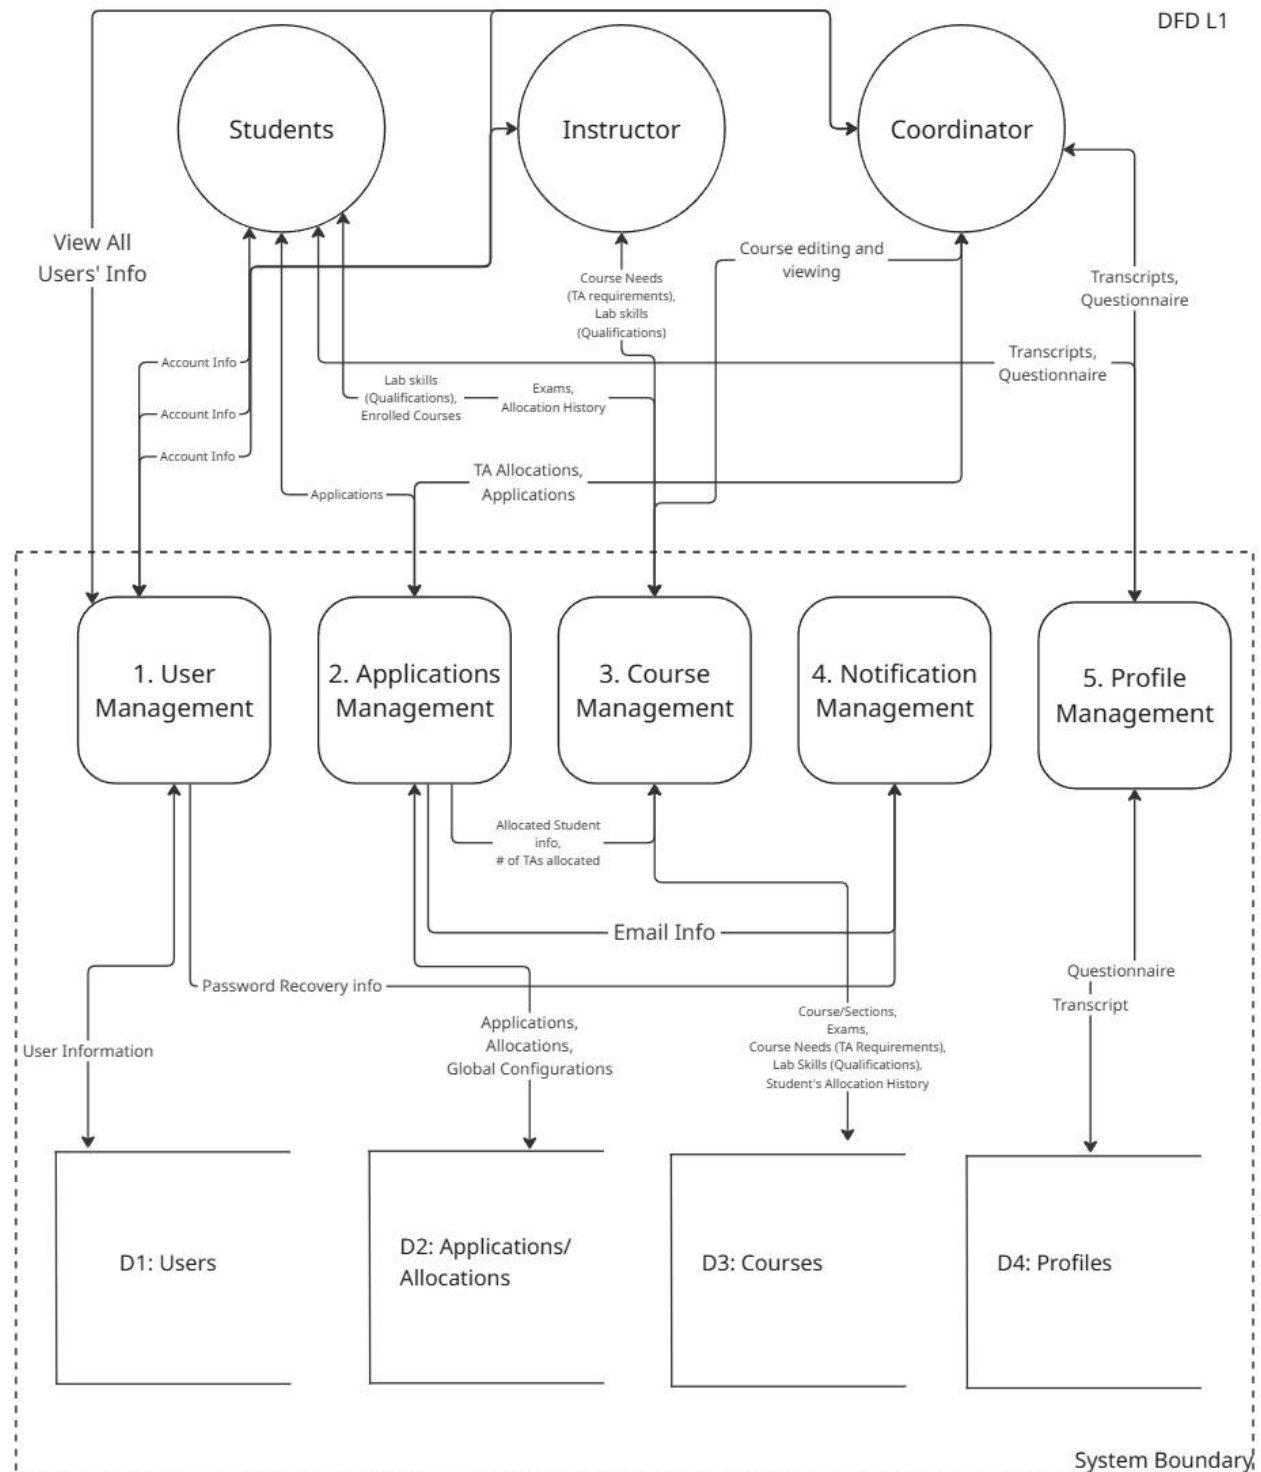

Client/UX

- The frontend through which users access the website.
-

System Features

Complete List of Working Features (who worked on what, and any bugs):

General User:

- Must be able to register, log in, and manage their account (inc password recovery)
 - Alex & Mandeep
- *Additional Requirement:* Must be able to view key metrics at their homepage(all users).
 - Mandeep

TA Coordinator:

- Must be able to create/edit/view academic terms and course offerings.
 - Aakash & Beichun & Du Pyo & Mandeep
- Must be able to assign instructors to courses.
 - Alex & Du Pyo & Aakash
- Must be able to review instructor-submitted TA needs.
 - Alex & Du Pyo & Mandeep
- Must be able to view and manage student applications.
 - Alex & Mandeep
- Must be able to assign students to courses/labs manually.
 - Aakash & Alex & Beichun & Du Pyo & Mandeep
- Must be able to view conflicts when scheduling students.
 - Alex & Beichun & Du Pyo & Mandeep
- Must be able to view a calendar-based interface showing all TA assignments.
 - Alex, Mandeep
- Must be able to view student weekly unavailability schedules during the allocation process.
 - Alex & Beichun & Du Pyo & Mandeep
- Must be able to view assignment totals per course/per TA.
 - Alex & Beichun & Du Pyo & Mandeep

- Must be able to export reports (CSV, PDF) and view analytics (e.g., unmet requests, total hours).
 - Seiya
- Must be able to import previous year allocations
 - Aakash
- Must be able to perform a bulk upload of course schedule for a term/assigned
 - Seiya
- Must be able to see archived terms and data must remain accessible for reference.
 - Alex, Mandeep
- *Additional Requirement:* Must be able to create a questionnaire that the student can permanently save answers for.
 - Aakash & Du Pyo & Mandeep
- *Additional Requirement:* Must be able to revoke an offer that is already sent to the student.
 - Alex & Beichun & Du Pyo & Mandeep & Aakash
 - *Bug:* If the student has already accepted an offer and the coordinator attempts to revoke the offer, the backend fails to delete the offer. Then, any further attempts to allocate the student fails.
- *Additional Requirement:* Must be able to save assignments (allocations) by three types of hours for the student: grading, lab-prep, and section (TA).
 - Beichun & Du Pyo
- *Additional Requirement:* Must be able to filter and view all transcripts
 - Seiya & Mandeep
- *Additional Requirement:* Must be able to filter allocations.
 - Aakash & Mandeep
- *Additional Requirement:* Must be able to create exams and assign students to those exams.
 - Aakash

Instructor:

- Must be able to view their assigned courses each term.
 - Alex & Du Pyo & Mandeep & Aakash
- Must be able to submit TA skills requests for each course, including:

- Required qualifications (previous courses/skills)
 - Beichun & Du Pyo & Mandeep
- Lab/tutorial skills needs
 - Beichun & Du Pyo & Mandeep
- Must be able to view assigned TAs once allocation is finalized per course.
 - Alex & Du Pyo & Mandeep & Aakash
- Must receive system notifications (e.g., deadline reminders, final allocation notice).
 - Alex & Mandeep

Student:

- Must be able to build a profile with:
 - Previous TA experience
 - Aakash & Du Pyo & Mandeep
 - Skills/qualifications
 - Beichun & Du Pyo & Mandeep
 - Course preferences
 - Alex & Mandeep
 - Update profile with previous experience
 - Aakash & Du Pyo & Mandeep
- Must be able to apply to with ranked preferences (see previous CMPS intake form)
 - Top three domain areas
 - Alex & Mandeep
 - Unavailability for term
 - Alex & Mandeep
 - Type of application (UTA/GTA)
 - Alex & Mandeep
- Must be able to specify and update weekly unavailability (e.g., Mon 9–11, Wed 2– 4) in a calendar view.
 - Alex & Mandeep
- Must be able to view submitted applications and their status.
 - Alex & Mandeep

- Must be able to view final assignments in a calendar view (lab, marking, prep, coordination)
 - GTA must be able to see their exam assignments.
 - Aakash
- Should receive notifications on key events (e.g., application accepted, deadline approaching).
 - Mandeep
- For GTA, must be able to specify availability during final exam periods.
 - Aakash
- *Additional Requirement:* Must be able to specify the number of hours the student wants to work.
 - Alex & Mandeep
- *Additional Requirement:* Must be able to specify whether the student wants to work in person or remote.
 - Alex & Mandeep
- *Additional Requirement:* Must be able to upload/download a transcript.
 - Seiya & Mandeep
- *Additional Requirement:* Must be able to fill out a questionnaire about personal details that is saved as part of the student's profile.
 - Aakash & Du Pyo & Mandeep
- *Additional Requirement:* Must be able to specify previously taught courses.
 - Aakash, Mandeep

System:

- *Bug:* Sometimes when running the command, `docker compose -f compose.combined.yaml up -- build`, the services do not get set up properly. (We suspect that it is because when some service *A* is unhealthy, the other services *B, C, D* that rely on service *A* gets terminated and the ports that the services *B, C, D* are supposed to be in gets occupied by the “ghosts” of services *B, C, D* which were already terminated).

Technical Specifications:

Use Cases:

Use Case 1: Accept/Deny Offer

Primary Actor: Student

Description: Student accepts or denies an offer the coordinator has sent during the allocation process of the coordinator.

Precondition: Student already submitted an application, and the coordinator has sent him an offer.

Postcondition: Upon acceptance, student can see an acceptance message. Upon denying, student can see a denial message.

Main Scenario:

1. Student clicks on "View Applications" tab in the Sidenav.
2. Student can choose to use the filter on the left to search for desired application for correct term.
3. Student views his or her desired application and click on the green button for accepting, and the red button for denying.

Extensions:

1. Coordinator revokes the offer which the Student accepted.
 - a) Student accepts or denies it again.

Use Case 2: Submit/Edit Application

Primary Actor: Student

Description: Student submits or edits his TA application for the current active semester.

Precondition: Student has or has not already submitted an application for this semester.

Postcondition: Upon submission/edit, student can view his or her application details in the bottom of the page.

Main Scenario:

1. Student clicks on "Start Application" tab in the Sidenav.
2. Student picks a semester for which he or she wishes to TA.
3. Student fills out the form and view his progress in the progress bar on the right. This includes the student's unavailability times, wanted working hours, ranked course preferences, his or her Undergraduate/Graduate status, and remote work preference.

4. Student submits application. If the student wishes, he or she can delete the application.

Extensions:

1. If an application already existed for the semester, student can scroll down and view application details before editing.

Use Case 3: Set Exam Availability

Primary Actor: Student

Description: Student sets his or her exam availability for a specific time of the year using a calendar.

Precondition: Student has or has not already set his or her exam availability.

Postcondition: Upon saving, student can view his or her exam availability details in the calendar. Popup indicates success.

Main Scenario:

1. Student clicks on "Exam Availability" in the Sidenav.
2. Student moves to the desired week of the year through the calendar interface.
3. Student drags and drops in the day of his or her choice for available time. Student clicks on Submit.

Extensions:

1. Student can wants to redo his availability times
 - a) Student can click on Reset.

Use Case 4: Answer Questionnaire

Primary Actor: Student

Description: Student submits his answers to the Coordinator's questionnaires. These questions are personal questions about the student such as his citizenship.

Precondition: Student has or has not already submitted his answers to the questionnaires.

Postcondition: Upon submission/edit, the student will see a popup verifying that his answers have been submitted.

Main Scenario:

1. Student clicks on "Profile Questions" in the Sidenav.
2. Student answers all the questions.
3. Student clicks on "Save Answers"

Extensions:

1. There are no questions set by the coordinator.
 - a) The student cannot submit anything.
2. An error occurs while saving.
 - a) A red popup appears to notify the user of the failure.
3. The student has already answered questions previously.
 - a) The questionnaire will already be populated of his or her previous answers and saving the answer will work as usual.

Use Case 5: Set Allocation History

Primary Actor: Student

Description: Student saves the courses for which he or she has TAed before.

Precondition: Student has or has not already saved information for allocation history

Postcondition: Upon submission/edit, student can view his allocation history details in the main allocation history page.

Main Scenario:

1. Student clicks on "Allocation History" in the Sidenav.
2. Student clicks on "Add Experience" button.
3. Student uses the filter to select which courses/sections he or she has taught before.
4. After selecting all the courses/sections, he or she clicks submit.

Extensions:

1. An error occurs while saving.
 - a. A popup appears notifying the user of the failure.

Use Case 6: Set Lab Skills (Qualifications)

Primary Actor: Student

Description: Student edits his lab skills (qualifications) based on the department code of a course (e.g. COSC, PHYS).

Precondition: Student has or has not already submitted lab skills (qualifications) for himself. The instructors have already created lab skills for department codes for which the student wishes to apply.

Postcondition: Student can come back to the page and see that his or her lab skills (qualifications) have been saved in the database.

Main Scenario:

1. Student clicks on "Student Lab Skills" in the Sidenav.
2. Student uses the dropdown to select which department code for which he or she wishes to set lab skills.
3. Student views and selects his or her lab skills.
4. Student clicks on Save Qualifications.

Extensions:

1. There are no lab skills set by the instructor.
 - a) The student will not be able to save anything.

Use Case 7: Upload Transcript

Primary Actor: Student

Description: Student uploads his or her transcript

Precondition: Student has a transcript prepared downloaded from Workday.

Postcondition: Student can see his transcript successfully uploaded.

Main Scenario:

1. Student clicks on "Upload Transcript" in the Sidenav.
2. Student choose a PDF to upload
3. Student views a file preview of the transcript.
4. Student confirms it's the right document and clicks on "Upload Transcript"

Extensions:

1. In the preview, the student can choose to view the preview in full screen.

1. There is an error after pressing on “Upload Transcript” button.
 - a) There is a popup notification alerting the user of the error.

Use Case 8: Add Teaching Section

Primary Actor: Instructor

Description: Instructor adds a section which he or she is teaching this semester.

Precondition: The section which the instructor is teaching is already saved in the database by the coordinator. The instructor already knows which sections he is teaching this semester.

Postcondition: The instructor sees a popup indicating that the section is added to his teaching list.

Main Scenario:

1. Instructor clicks on “Sections & Req(s)” in the Sidenav.
2. Instructor clicks on “Add Section” button.
3. Instructor uses the Section Filter to select on a section that he is teaching by clicking on “SELECT” beside the correct section.

Extensions:

1. There is an error when saving.
 - a) Instructor will see a popup indicating the error.

Use Case 9: Add Need (TA Requirement)

Primary Actor: Instructor

Description: Instructor adds a course need (TA requirement) to a section that he or she is teaching. The course need is comprised of: TA's prerequisite taken courses, basic description, and required grading hours.

Precondition: Instructor has already added a section that he or she is already teaching or he or she has already been assigned sections by the coordinator. The Instructor has a section with type “LECTURE” in the list of his sections teaching.

Postcondition: Instructor can see inside a small card the details of the course needs.

Main Scenario:

1. Instructor clicks on “Sections & Req(s)” in the Sidenav.

2. Instructor clicks on "Add TA Requirement".
3. Instructor is in a new page. He or she fills out a basic description, the required grading hours, and chooses the prerequisite courses using the filter.
4. Instructor then clicks on "Save TA Requirements"

Extensions:

1. Instructor does not see the section that he is teaching
 - a) Instructor can use the filter to make sure the filters are correct. If he or she still cannot see it, the instructor can add a new section that he or she is teaching.

Use Case 10: Set Lab Skills (Qualifications)

Primary Actor: Instructor

Description: Instructor sets lab skills (qualifications) by the department code. The lab skills (qualifications) may be lab skills (qualifications) already set by previous instructors. Any changes to the lab skills for some course will permanently change the lab skills for that course, not the section of the course.

Precondition: Instructor has already added a section that he or she is already teaching or he or she has already been assigned sections by the coordinator.

Postcondition: Instructor can view the lab skill (qualification) that he or she has added and can see the option to delete it. There is a popup indicating the action has succeeded.

Main Scenario:

1. Instructor clicks on "Qualifications & Skills" in the Sidenav.
2. Instructor can see the list of unique courses he or she is teaching.
3. Instructor can click on "Add a qualification/skill" to add a short description of the skill/qualification or delete some pre-existing lab skill(qualification)

Extensions:

1. Instructor wishes to delete a lab skill (qualification)
 - a) The system verifies the deletion by asking twice for confirmation. The second time the instructor must type something out.

Use Case 11: Set Details (e.g. Student #)

Primary Actor: General User

Description: General User can update his or her general profile details such as department, major, student number, employee number, and more.

Precondition: General User is already registered and is logged in.

Postcondition: General User sees the details in his or her main profile page. The level of completion of the profile details shows up in the profile page.

Main Scenario:

1. General User clicks on “Profile” in the sidenav.
2. General User clicks on “Edit Profile” when inside the Profile page.
3. General User fills out the form and saves it.

Extensions:

1. General User tries to input some number different to 8 digits as his student/employee number.
 - a) The system will alert that the user must insert 8 digits.
2. General User tries to input some other incorrect type of data into a form.
 - a) The system will alert or block the user.

Use Case 12: Recover Password

Primary Actor: General User

Description: General User can recover the password through email.

Precondition: General User has forgotten his or her password and wishes to recover it. General User already previously had an account in the system.

Postcondition: General User has accessed his email and changes his password.

Main Scenario:

1. General User is in the login page and clicks on “Forgot Password”
2. General User types in the correct email address.
3. General User accesses his or her email and clicks on a link.
4. In the new page, General User changes his or her password.

Extensions:

1. General User inputted the incorrect email for the recover password function.

- a) The system still alerts the user that an email has been sent.

Use Case 13: Filter All Applications

Primary Actor: Coordinator

Description: Coordinator views all the applications submitted by students. Coordinator can view their specific details such as the acceptance status and their current allocation status to some section.

Precondition: There exists applications submitted by the student.

Postcondition: Coordinator sees a list of applications and their descriptions.

Main Scenario:

1. Coordinator clicks on “TA Applications” in Sidenav.
2. Coordinator can use the filter on the left side to filter by application details.
Coordinator can use the filter on the right side to filter by allocation details.
3. Coordinator can click on “View Details” for an application card to view the details of an application, including the allocation.

Extensions:

Use Case 14: Allocate Student to an Exam

Primary Actor: Coordinator

Description: Coordinator allocates a student to an exam as one of the following roles: Marking, Preparation, Coordination.

Precondition: A student with an availability for the exam exists in the database.

Postcondition: Coordinator views at the bottom of the page the exams and their allocated students.

Main Scenario:

1. Coordinator clicks on “Exams” in the Sidenav
2. Coordinator creates an exam by filling out the left form.
3. Coordinator uses the dropdown to see all existing students. Coordinator clicks on each student to see if their availability times match with the exam time.
4. Coordinator picks a student and assigns him or her.

Extensions:

1. Coordinator tries to allocate the student to an unavailable time or create an exam with an impossible time interval.
 - a) The system alerts the user of this error.

Use Case 15: Allocate Student to a Section

Primary Actor: Coordinator

Description: Coordinator allocates a student to a section by selecting a section and an application. Coordinator uses a calendar for the process. Coordinator allocates the student to some of three hours: grading, lab-prep, and section (TA) hours.

Precondition: A section is created and the course needs for the section is submitted. There exists an application in the database.

Postcondition: Coordinator sees a “Revoke” offer button at the bottom of the page for the option to cancel an offer.

Main Scenario:

1. Coordinator clicks on “TA Allocations” in the Sidenav.
2. Coordinator uses the left Section Filter to click on a section. The Calendar is populated with the correct times.
3. Coordinator uses the right Application Filter to click on an application. The Calendar is populated with the correct student’s unavailability times.
4. Coordinator decides whether to assign the student to a Section Hour(TA) or not by either: clicking on the checkbox in the bottom of the page or clicking on the section.
5. Coordinator assigns the student to a section hour, lab-prep hour, and/or grading hour.

Extensions:

1. Coordinator makes a mistake and wishes to deallocate a student
 - a) Coordinator can revoke a specific allocation by the hour.
2. The student already accepted the offer for which the coordinator wishes to to revoke.
 - a) Coordinator can still revoke it, and the status of the offer gets reset.

3. The section that the coordinator clicks does not yet have an instructor TA requirement saved onto it.
 - a) The allocation will not work.

Use Case 16: Allocate Student via CSV

Primary Actor: Coordinator

Description: Coordinator uploads allocation history via CSV.

Precondition: The CSV contains users that already exist in the database, and sections that already exist in the database.

Postcondition:

Main Scenario:

1. Coordinator clicks on "Courses" in Sidenav.
2. Coordinator clicks on "Import Alloc" button.
3. Coordinator uploads the csv. The system processes it.
4. Coordinator clicks on save.

Extensions:

1. Preconditions for the CSV are not met.
 - a) The UX shows why the preconditions are not met in red, and what has to be fixed. The Coordinator may have to manually create fake users if he or she wishes to force some user data.
2. Some sections in the CSV are not yet created.
 - a) Coordinator can choose to auto-create the sections that do not exist.

Use Case 17: Bulk Upload via CSV

Primary Actor: Coordinator

Description: Coordinator bulk uploads course/section information via CSV.

Precondition: Coordinator has a prepared csv with the correct information about courses and sections to upload.

Postcondition: Coordinator sees a success message and can view the new information through the filters.

Main Scenario:

1. Coordinator clicks on “Courses” in the Sidenav
2. Coordinator clicks on the “Import CSV” button.
3. Coordinator uploads a csv with the correct information.
4. Coordinator sees a preview of the information and clicks “Import”

Extensions:

1. Course/section already exists in the database.
 - a) The information of the course/section in the database gets overridden by the csv data.
2. Coordinator doesn't know what the CSV should look like
 - a) Coordinator can download sample csv to see the template.

Use Case 18: Filter All Courses

Primary Actor: Coordinator

Description: Coordinator can filter all the courses that exist in the database. He can then click on a course/section and go to its page.

Precondition: There exists courses/sections in the database.

Postcondition: Coordinator can see all the courses/sections in the database according to the filter he chose.

Main Scenario:

1. Coordinator clicks on “Courses” in the Sidenav.
2. Coordinator uses the filter to find the course/section he wants to find. He can use advanced filters by clicking on the arrow.

Extensions:

Use Case 19: Filter All Users

Primary Actor: Coordinator

Description: Coordinator can filter all the users that exist in the database. He can then click on a user and go to the user's profile page.

Precondition: There exists users in the database.

Postcondition: Coordinator can see all the users according to his set filters.

Main Scenario:

1. Coordinator clicks on “Users” in the Sidenav.
2. Coordinator uses the filters. Coordinator will see the list of users.

Extensions:

1. If Coordinator selects a role, Coordinator cannot search by university number or ID.
2. If Coordinator enters some value in university number, Coordinator cannot search by role or ID.
3. If Coordinator enters some value in ID, Coordinator cannot search by role or university number.

Use Case 20: Set Active Semesters

Primary Actor: Coordinator

Description: Coordinator can set a global configuration to set active and inactive semesters. Only sections with active semesters can get updated by users in the website. Changing a semester to inactive will in effect make a section with that semester be archived.

Precondition: There can be or not be pre-existing semesters.

Postcondition: A green popup indicates the saving has successfully worked.

Main Scenario:

1. Coordinator clicks on “Term & Deadline(s)” in the Sidenav
2. Coordinator clicks on “Edit” for a semester.
3. Coordinator clicks on the checkbox under the “Active” column to deactivate or activate the semester.

Extensions:

1. The term for which the admin wants to set doesn't exist
 - a) Coordinator can create a new term under “Add New Term”.

Use Case 21: Set Deadlines

Primary Actor: Coordinator

Description: Coordinator can set a global configuration which is the deadlines for instructor needs submission, student offer accepting, and student application submission.

Precondition: The system already seeds a default deadline for the global configurations.

Postcondition: The system shows the date of the new deadline and a popup indicates the saving.

Main Scenario:

1. Coordinator clicks on “Term & Deadlines(s)” in the Sidenav
2. Coordinator chooses one of the three deadlines and makes date modifications.
3. Coordinator clicks save.

Extensions:

1. Coordinator makes a mistake
 - a. Coordinator can just adjust the date and save again.

Use Case 22: Deactivate Users

Primary Actor: Admin

Description: Admin can deactivate users. The deactivated users cannot login.

Precondition: There exists users in the database.

Postcondition: Admin can see the “deactivated” status and the deactivated user can no longer login.

Main Scenario:

1. Admin clicks on “Users” in the Sidenav.
2. Admin searches for a specific user using the User Search Filter.
3. Admin can click on the “Deactivate” button on the right side of each user.

Extensions:

1. Admin wishes to reactivate the user.
 - a) Admin can click on the button again to re-activate it.

Use Case 23: Change Roles

Primary Actor: Admin

Description: Admin can change the roles of a user. The roles are one of: Admin, Coordinator, Instructor, Student. A user can have more than one role.

Precondition: There exists users in the database.

Postcondition: If the Admin goes into the changed user's profile, he or she can see the roles that he or she has.

Main Scenario:

1. Admin clicks on "Users" in the Sidenav.
2. Admin searches for a specific user using the User Search Filter.
3. Admin clicks on a User to go into the profile.
4. Admin clicks on "Change role" and picks the roles he wants the user to have.

Extensions:

1. Admin wishes to undo the change.
 - a) He can merely change the role again.

Use Case 24: Audit

Primary Actor: Admin

Description: Admin can see an audit log of all the CREATE, POST, DELETE requests in the system by any user in the system. He can see the precise name of the user who made the change.

Precondition: Admin is logged in and there was some change in the database.

Postcondition: Admin can see the before and after JSONs of the precise log.

Main Scenario:

1. Admin clicks on "Audit" in the Sidenav.
2. Admin clicks on a specific service: one of profile-service, application-service, course-service, and user-service.
3. Admin can add more information in the filters or not.
4. Admin clicks on Apply.
5. Admin sees the list of filtered results.
6. Admin clicks on a specific log.

Unimplemented Requirements:

- The system must include help popups.
- The system audits logins.
- The system's calendar views support filtering by time window.
- The system alerts coordinators to conflicts by overlapping assignments (allocations).
- *Additional Requirement:* The system uses HTTPS to ensure all communication between client and server has encryption of data in transit.

- *Additional Requirement:* Students must be able to manually input the courses the student has completed.
- *Additional Requirement:* The system will allow students to bulk upload their CSV information concerning the courses they have taken.

User Feedback

Peer Testing Event 1:

We had 34 testers test and then respond to our survey, mostly from users of the same project theme as us (theme #1 TA allocation)

<https://docs.google.com/forms/d/116bP33MaPCZLFPiKR8k5rGkPqzK1v6Hj3JKjbuFZcbs/edit#responses>

Tasks tested: Create accounts, add courses, create an application, try and allocate a student and send them an offer, and also to try the profile questions.

Overall, the system's visual design and layout received strong endorsement, with an average rating of 4.3 out of 5 for simplicity, clarity, and aesthetics (87% rating 4 or 5). Participants also found the interface highly visible (mean 3.8/5; 63% ≥ 4) and well-integrated (mean 3.5/5; 44% ≥ 4). Ease of use and user confidence were both solid (means of 3.6/5; over half rating 4 or 5), while the perceived complexity remained low (mean 2.6/5; 52% rating 1 or 2) and the learning curve modest (mean 2.8/5; 43% rating 1 or 2). Finally, respondents agreed that most new users would learn to operate the system quickly (mean 3.6/5; 46% rating 4 or 5).

Received Feedback/Problems Noticed:

- Add course filter button should have better visibility
- Overall testers liked the UI
- The add Ta Requirement button was unclear
- Adding course page was long and a bit unclear for the fields to add and constraints
- Qualifications should have autofill options for ones that are made
- Users were struggling with searching with Filters..
- Some wanted auto search when typing in the search bar for filters, and to hide the filters by default

- Some feedback about the errors on feature(s)
- More seeding for Profile Questions and Lab Skills (Qualifications)
- Password fields should have eye icon to see the password
- Our system is not so centered around Terms (year and semester)
- Having both Course Creation and Section Creation on the same page is a bit confusing.

Directions the team took in response:

- Improving the filter UX: Issue #421
- Improving the visibility of adding a TA Requirement in the TA Requirement page : Issue #415
- Adding course page should have progress bar. Perhaps make fields of Section and Course non-nullable. Issue #424
- Global configuration for restricting coordinators semester/year choice. (New table for terms) Issue #427 and #428
- UI improvements for Course/Section Creation. Issue #451

Issue# 421, 415, 424, 427, 428, 451

Peer Testing Event 2:

We had 43 testers test and then respond to our survey, mostly from users of the second project theme (theme #2 Exam Generation)

https://docs.google.com/forms/d/1GTW6jNti24k3n_KwCo3eRxkw0ivcaS_mFMjpV-IcJw/edit#responses

Tasks tested: Create a section, apply for courses, allocate them to a section, instructor specify needs, and creating exams and assigning students to these exams.

Overall, the system's visual design and layout received strong endorsement, with an average rating of 4.02 out of 5 for simplicity, clarity, and aesthetics (77% rating 4 or 5). Participants also found the interface highly visible (mean 4.16/5; 81% ≥ 4) and easy to use

(mean 3.93/5; 81% ≥ 4), which translated into solid user confidence (mean 4.07/5; 77% ≥ 4). Function integration scored moderately (mean 3.53/5; 53% ≥ 4), while perceived unnecessary complexity was middling (mean 3.23/5; 42% felt it was overly complex) and upfront learning requirements were mixed (mean 3.19/5; 42% said they needed a lot to learn). Finally, a majority believed new users would pick it up quickly (mean 3.65/5; 56% rating ≥ 4)

Feedback received from peer testing event 2 helped us identify various bugs that were in the system. Most notably:

- Adding sections was too complex and didn't have enough error handling
- Having sections and courses next to each other on the add page was confusing
- The add section page didn't work after creating a course for most testers
- Not all the buttons on the page shared the same colours and when highlighting had different colours
- The placement on the buttons was inconsistent
- Creating and adding a student to the exam was hard to find them since they forgot the name
- Duplication errors on the frontend with key value pairs
- Allocation based on availability was confusing
- Clicking courses on the allocation page wasn't intuitive - testers didn't know they could click the courses that showed up on the left side, and same for the applications on the right
- Layout sizes were inconsistent between the pages

Overall, testers liked the UI and the feel of the app, but just needed a helping hand to navigate through some of the parts and were unsure exactly where to do/what to do once they got there.

From this we spent a while cleaning up various bugs with the section page UI and form handling, cleaned up the colour inconsistencies with buttons, and fixed a number of pages on the layout. The issues that were made for bug fixes mostly, and these are the related issues for them:

Directions the team took in response:

- Improve course related pages including the details ones. (Improving adding sections) Issue 510
- Bug in Schedule Viewer. Issue 550.
- Some bugs (Student Allocation History) Issue 544
- Fix minor bugs (Filter Sections, Section Schedules) Issue 540.
- Small fixes to previous problems (logo header change)(instructor's add section fixed) Issue 523.
- Improve the student filter in the assign student to exam form Issue 516.

Issue# 510, 550, 544, 540, 523, 516

Reflections:

After testing in both events, it became clear that many users needed help with aspects and would benefit from tutorials, and also adding more strict form validation as many testers were able to break the system by putting in unexpected values that weren't handled. We also found that before starting both peer testing events that we should have tested our own systems more thoroughly to find bugs before asking our peers to test it. There were issues found that we would have found if we had done the tasks we asked our peers to do before the event.

Results from re-testing/re-validation:

After fixing all the known issues the testers pointed out, we re-tested the workflow to ensure it was working as expected. Section creation workflows, schedule viewer, student history, filters, header/logo, and exam assignment filters all function correctly. Validation errors were eliminated, UI consistency restored, and regression tests revealed no new issues.

PM & WBS/FBS

Lessons Learned

Aakash Singh:

Development Process:

Throughout the project, I worked extensively on both the backend and frontend, contributing to the development of a cohesive full-stack system. On the backend, I focused on building microservices using Spring Boot, designing RESTful endpoints, managing service-to-service communication, and ensuring DTO consistency. On the frontend, I developed several key features using React, including form flows, dynamic UI updates, and data fetching logic that aligned with our backend APIs. I collaborated closely with teammates across both ends to ensure seamless integration and a smooth user experience. Using Kanban worked really well for me – I appreciated the flexibility to pick up tasks based on availability and complexity, rather than being constrained by strict sprints. This approach allowed me to stay productive and adaptable throughout the project.

Challenges and Solutions:

One of the biggest challenges I faced during the project was context switching between frontend and backend work. Since I was involved in both layers, it often required quickly shifting focus between UI/UX design decisions and backend logic or database structure. To manage this, I started blocking out specific days or hours to focus solely on one side of the stack, which really helped me stay in the zone and avoid making careless mistakes.

Personal and Team Growth:

This project really pushed me to become a more well-rounded developer. On the backend, I got more confident with Spring Boot, database handling, and writing modular code across services. On the frontend, working with React, component states, and testing libraries helped me better understand how the user experience is built and maintained. I learned to think not just about whether something works, but *how* it feels for the end user.

As a team, we became noticeably more efficient over time. In the early stages, communication gaps caused delays — but as we got more comfortable with each other, we started anticipating issues, asking the right questions early, and setting up working agreements that kept us aligned. We also got better at assigning tasks based on strengths, which made the workflow much smoother during high-pressure periods.

Lessons Learned:

One key lesson I learned is the importance of clear ownership. When features or bugs were vaguely assigned, progress slowed. But once we started being explicit about who's

responsible for what — and following up with each other regularly — things moved faster and with fewer surprises.

I also learned that it's better to build incrementally and test small chunks of code, especially in a full-stack system where small changes can have ripple effects. There were times when larger, untested changes led to broken pages or mismatched data, and it would take hours to trace back the issue. Since then, I've developed a strong habit of writing and testing smaller PRs with clear, testable goals.

Lastly, I gained a deep appreciation for user feedback. Even features that made sense to us as developers sometimes confused real users or testers. After a few iterations based on peer testing feedback, it became clear how vital that feedback loop is in shaping a usable and intuitive product.

Alexander Argatoff:

Development Process:

I spent a lot of time working on the microservices and backend implementations, and would often work with Mandeep who would do the frontend to implement the features together. I found this worked really well by planning the exact DTO's we'd send to each other at which endpoints, and it was quite pain free. The use of Kanban to also take on new issues when we finished one worked well for me - it allowed me to take something, and complete it without worrying about making sure it was done in a sprint. If something was quick and I could finish it in an hour, great - if it needed a few days, then that was fine too.

Challenges and Solutions:

One major challenge was adapting for the admin role from the initial user implementation. Originally I made a user class and then a student, instructor, and coordinator subclasses to be stored in the DB. The issue was allowing admin, and the realization that some users like our client Dr. Davis could be an admin, and coordinator, and instructor etc. So the refactor for users to be combined back into one user with many to many roles was lengthy to refactor. Another major challenge was of course the initial microservice setup - I spent a few weeks learning about the framework and trying to get everything working because it was new.

Personal and Team Growth:

The frameworks and technologies we used will be incredibly useful for me going forward. The decision to make the backend use a microservice architecture in Spring boot was completely new to me, and since microservices are very popular in large companies, having the experience of working with distinct services that need to communicate helped me gain a bunch of new experience with things like load management, service discovery, gateways, and database management when each service has its own database so you can't have foreign key and cascade constraints since they are separate. I think this experience will be very useful going forward professionally.

Lessons Learned:

I knew that UX would be important, but it became abundantly clear as development started how important mockups are and that you should always have mockups that the team and client agree on BEFORE you start making the page. There were many frontend pages that were created without a mockup or that didn't follow a made mockup that had to be refactored later on in the project. I also learned the importance of code reviews - sometimes code and PR's were pushed with not enough manual testing which led to issues during presentations and the peer testing events, and also with no proper code reviews you can end up with disorganized code. There were some PR's that I merged after a teammate asked me to approve since we were in a rush and I couldn't test it, which led to breaking other features that weren't related to that PR but weren't tested. This obviously can't be the case and needs to always be tested.

Beichun Gu:

Development Process:

Working on the student qualifications feature with Dup was one of the most valuable parts of my project experience. Dup focused on the frontend while I developed the backend logic, and our collaboration highlighted the importance of clear and early communication in cross-functional development.

Challenges and Solutions:

One of the key challenges we encountered was mismatched expectations about the structure of the DTOs and API endpoints. Initially, we began coding our respective parts without fully aligning on the exact data contracts. As a result, integration was delayed, and we had to refactor parts of our code to ensure compatibility. From this, I learned a critical lesson: before starting development, especially when responsibilities are divided between

frontend and backend, the team must reach a shared understanding of API contracts and data formats. This saves time, prevents errors, and improves overall efficiency.

Additionally, I came to appreciate the importance of thorough testing. Early in the project, we sometimes deprioritized testing to focus on delivering features quickly. However, this often led to regressions and debugging sessions that could have been avoided.

Personal and Team Growth:

Through this experience, I've developed a habit of writing unit and integration tests alongside my backend work, which has made my code more reliable and easier to maintain. On a personal level, this project helped me improve my backend development skills, especially in working with Spring Boot microservices and service-to-service communication. As a team, we became more agile and adaptive over time—our sprint planning and code review processes improved significantly by the end of the project.

Lessons Learned:

Looking forward, I will carry these lessons into future work: always define interfaces clearly before development, prioritize testing, and communicate consistently with collaborators. These practices will help me contribute more effectively to future team-based software projects.

If you want, I can also reformat this into a more concise, bullet-point style for a project report or portfolio. That would make it easier for recruiters or professors to scan quickly.

Du Pyo Park:

Development Process:

In the beginning, our team workflow was: for each feature, one person would do the frontend and the other person would do the backend. I had trouble with this.

For example, when working on the Profile Questions in the *profile-service*, the backend and frontend was complete. Afterwards, the job of integrating the backend and frontend was the frontend developer's task, as it is more natural for the frontend developer to do it. However, I found that the backend was not giving me the response that I wished. The endpoints of the backend were unusable for me, so I had to dive into the backend and edit and create new things in the backend so that it would work with the frontend. This led to more work than I expected.

When doing another feature with a backend developer, I decided to plan the exact request and response JSON between the frontend and backend before development started. This was to make sure future integration would be streamlined. This did help a lot more in

streamlining the integration process of the backend and frontend, I still held the bias that the workload was more heavily leaning towards the frontend developer's side, and thus I tried to avoid dividing the workload for one feature for two different people afterwards. This experience will be something I will always remember in future projects.

Challenges and Solutions:

It was a challenge to follow the ER diagram exactly as expected. The change in the Course Needs had a big influence in the dataflow of other models. Discovering the limitations of the former ER diagram created some challenges in making other services work in a similar way to the Course Needs. After we heard the Client's feedback, the change of the Allocation data structure in order to use grading hours, lab-prep hours, and section (TA) hours, had a huge impact in all of the pages that required allocation information. The change in this data structure created great dataflow inefficiencies, despite making the project work.

Personal and Team growth:

Personally, I think I learned better how to collaborate and plan and log my work more efficiently. My skills in Typescript, Spring Boot, Java, React, and microservices has significantly improved. I feel that if I were to do this project again, I would plan and code in a different way such that the code is more scalable. Team-wise, I think we learned how to use Github more efficiently. All of our teammates now create branches out of issues created in Github. I think the team learned how to merge each other's code much better.

Lessons Learned:

I learned the difficulties of dataflow without explicit planning beforehand. I came to understand the importance of DFD level 2 or 3 diagrams. I learned that a change to the data structure can bring great headaches, and not necessarily better and more efficient dataflows. I also learned the importance of UX planning. Lack of UX planning caused some confusion between the team members as to the progress the project was making.

Mandeep Singh:

Development Process:

Throughout this project, I played a role in frontend development, UI/UX refinement, and integration. I also contributed to backend endpoints when necessary and consistently

reviewed a large number of pull requests to ensure code quality and alignment. We followed a Kanban workflow to manage our tasks, and I frequently communicated with the team via Discord. From the beginning, there were inconsistencies in design and implementation due to the absence of a unified UI plan. To address this, I took ownership of the frontend towards the end, improving it PR by PR using a build-then-refine methodology that significantly improved user experience and maintainability.

Challenges and Solutions:

One of the early challenges was learning the framework, as I had no prior experience with it. Over time, I became more comfortable and efficient. Other challenges included delays caused by dependency issues, low team activity at times, and miscommunication that resulted in duplicate or misaligned work. Some pull requests remained unreviewed for long periods, slowing progress. The frontend structure also changed multiple times, which caused additional adjustments. Toward the end, collaboration improved, and development became more streamlined.

Personal and Team Growth:

This project provided valuable hands-on experience with a modern tech stack. On the frontend, I worked extensively with React, Tailwind CSS, and Vite, which improved my skills in responsive UI design, component structuring, and performance optimization. On the backend, I contributed to integration tasks using Spring Boot within a microservices architecture, which gave me practical insight into API design and service communication. On a personal level, I learned how to work more patiently through complex problems and became better at managing time and expectations in a team setting. As a team, we had some early struggles with coordination and uneven task distribution, but things little improved over time. These experiences will shape how I approach future group projects, being more upfront in communication.

Lessons Learned:

A key lesson was the importance of proper initial planning. For example, the application and allocation features had to be reworked multiple times due to evolving client requirements. This could have been reduced with better requirement validation early in the process. I realized how important it is to be upfront about delays or blockers so that the rest of the team can adjust and no one feels overwhelmed. Another lesson while working on a MVP highlighted how critical proper testing is. Quick changes introduced unexpected bugs that could have been avoided with more structured test coverage earlier in the process. Lessons like early planning, clear communication, and consistent testing—are essential to keep in mind for future projects to ensure smoother development and stronger outcomes individually and as a team.

Seiya Iwama:

Key contributions included creating the Data Flow Diagram, implementing Course Management, delivering CSV export and import, building Transcript Upload for students and Transcript Management for coordinators, and helping raise overall test coverage.

Development Process:

I started with the DFD to clarify service boundaries and data movement. I then iterated on Course Management, building the list view and a draft UI. On the Course page the work was split between a frontend member and a backend member, and integration was harder than expected due to mismatches and rework. From the CSV features onward I owned pages end to end across frontend and backend, which cut coordination and sped up integration. There was a brief gap when I could not contribute due to personal issues and failed to notify the team in time, which increased others' workload. From the middle of the project onward, I implemented CSV export and import features across backend, frontend, and tests. Near the end, I delivered Transcript Upload for students and Transcript Management for coordinators, and I led the effort to raise overall project test coverage.

Challenges and Solutions:

Split ownership on the Course page led to diverging expectations for requests and responses, so integration stalled. Page level full stack ownership kept design and integration in one flow and removed handoff delays. Early in the project my pull requests grew too large and slowed reviews, so I broke work into smaller pieces and kept pull requests small and frequent. I aligned contracts before coding and rewrote tests, which stabilized integration.

Personal and Team Growth:

Personally I learned to own a page end to end and to decide faster by comparing options with AI. I kept commits readable with clear intent, change, and impact, and I made my work easy for others to understand by writing straightforward code, adding concise summaries in issues and pull requests, and leaving comments where they would be most useful. On the team side, we shaped pull requests to be easy to review by keeping them small and focused, and by linking to the relevant issue and the expected inputs and outputs. An early ask culture reduced duplicate work and misunderstandings. Combining small pull requests with Kanban reduced review backlog and led to more stable integrations.

Lessons Learned:

I learned that large tasks slip and stall reviews. I now split work into small day sized pieces and test as I go. I share status early and ask for help when blocked so we can rebalance quickly. These habits kept integration steady and reduced surprises. Small and frequent pull requests and simple commits made the code easier for teammates to read.

Hand-over/Installation/Setup

Setup:

Much of the documentation for the app itself for startup, testing, and other features like authentication are included in our project README. I'll share the content of the markdown file here.

Getting the Docker Container Started

1. Make sure you have docker installed on your computer
2. Navigate to the root folder
3. Fill out `.env` files if they exist.
4. Run ``docker compose up --build`` in the terminal. You don't need ``--build`` afterwards.
5. To access the container shell, run ``docker exec -it <container-name> sh``. Container name for the frontend is ``frontend``.
6. When the container is running, website should be exposed at <http://localhost:5173>
7. If you want to use a containerized backend, use the combined yaml file using command ``docker compose -f compose.combined.yaml up``, default compose only uses the frontend and MySQL containers. For this to work, you will need the newest maven and jdk versions so it can copy those files for the container. Instructions are under the spring boot section below.

More information on using Docker and the general files for setup can be found on <https://docs.docker.com/manuals/>

Docker instructions/tips

- when installing a new library using `npm install`, enter the container shell, and then run `npm install <name of library>`
- you will probably see a red underline when using the new package that you installed. Outside of the shell, on your local terminal, after `cd`-ing to `app/TA-portal-infinity`, run `npm install`. Then the local `node_modules` will be updated too, and the red underline will disappear.

Vitest (Frontend Testing)

1. For testing, run ``npm run test`` after entering the docker container shell in the root. Run ``npm run test:watch`` when modifying files as you test.
2. For coverage, run ``npm run test -- --coverage`` and you will see the coverage inside the `index.html` file in ``my-custom-coverage`` folder. Configurations for Vitest is in ``vitest.config.ts``.

Spring Boot

You can find documentation for the framework here (<https://docs.spring.io/spring-boot/index.html>) .

Backend Setup

The database connection for MySQL comes from the docker container - this is specified in the normal docker compose file that has the frontend and database, as well as the combined yaml. You will need the MySQL container running for the applications to run.

Since there's no hot reloading with the docker containers, it makes more sense when we are developing the backend to just have the DB and frontend running

in the containers, and run the backend as needed. If you are using VSCode, you can download the Spring Boot extension pack which gives a dashboard to easily start and stop the different services.

This can restart the application faster to see changes than needing to rebuild the container every time in docker when we change something. We can still use it as a container when deploying, or if you'd really rather wait for the container to build each time you make a change.

For this to work, make sure you have openjdk 24(<https://jdk.java.net/24/>) in your path system environment variables (or through a package manager) and in your Vscode JDK path, and Maven 3.9.9(<https://maven.apache.org/download.cgi>) also in your path or through a package manager.

When the programs are running, the application properties should default to dev unless started as a container, which will then use the docker properties and adjust the url to connect to the running MySQL container appropriately.

Configuration

The 4 current services *user-service*, *course-service*, *application-service*, *profile-service* connect to their databases using <https://spring.io/projects/spring-data-jpa>, which are initialized at first with the `./init/init.sql` file which creates them first and grants privileges to `dev_user`. If you need more databases, add them to this file and rebuild the MySQL container.

In the `application.properties` for the services, the database is set to `'create-drop'` which will recreate the database on restart of application. You can change this to `'update'` to persist the data between sessions, but will need to use `'create-drop'` if you change parameters at some point. You can also use command line runner interface to put in data consistently on application start with `'create-drop'` if you want.

The API Gateway (<https://spring.io/projects/spring-cloud-gateway>) is running on port 8080, and the routes for the various endpoints are configured in the application properties files, so you can add more as you implement new services.

The service registry microservice is running the Eureka (<https://cloud.spring.io/spring-cloud-netflix/reference/html/>) server, and all other services have the Eureka client. This means that the Eureka server is connected to all of the subscribed Eureka clients. This allows the API Gateway to redirect as needed, and down the line can provide load balancing and other features.

Inter service communication is done using OpenFeign (<https://spring.io/projects/spring-cloud-openfeign>), and allows the use of interfaces to call methods in another microservice.

Backend Tests

Testing is done using JUnit (<https://junit.org/junit5/>) and Mockito (<https://site.mockito.org/>) is a nice library for mocking database and object calls for our unit testing, and coverage is run with Jacoco (<https://www.eclemma.org/jacoco/>). Go to the service you are trying to get coverage for and run `mvn test jacoco:report`. You can run individual unit tests through the java test runner extension, but that won't give coverage. Once the tests pass there, you can then run the Jacoco command to get coverage. If you install the Coverage Gutters extension and set it so `watch` and `show coverage` in the command palette you can then see which lines are covered and which aren't. Jacoco also creates an html if you just want to see it there found in `target/site/jacoco/index.html`.

Eventually, we can use `@SpringBootTest` for integration tests with an in-memory H2 database that can start for the tests and destroy itself after. Test service logic and utilities with Junit and Mockito, and test controllers with HTTP mappings with `@WebMvcTest` and `MockMvc`.

Auth

Authentication is done using JWT's through the jjwt (<https://github.com/jwtkt/jjwt>) library to manage them. At the moment, the gateway service has a filter that checks if the JWT is valid before allowing any routes through, except for auth. On login in the user service, a JWT is created with the users email as the subject, and with claims of their role and id. The gateway when it parses this JWT extracts these and puts them into the headers to be forwarded downstream, which means that if the token is valid you'll know their privileges and id to do functions.

I've commented out the part of assigning an expiration time, since it means that in the postman calls the JWT used for authentication would need to be changed constantly. This also means that if a user has their account deleted, they can still access the system if they have their old JWT. What this means is that in general for sensitive operations we should make sure the user is available, and once more of the core functionalities of the system are working, it would be good to re-introduce the time expiry for JWT's as well as using refresh tokens to account for users being deleted from the system.

Each service will need spring security with JWT auth filter to handle granted authorities from the headers, and the method security provides the use of annotations to specify which role can do what function. Finally the security config just specifies that the JWT filter has to provide auth for anything to work in that service.

Sign up and login

Fill Out the Sign-Up Form

- First Name: Enter your first name. (e.g., *John*)
- Last Name: Enter your last name. (e.g., *Doe*)
- Email: Provide a valid email address (e.g., *student@ubc.ca*). You will use this to log in.
- Role: From the dropdown menu, select "Student" as your role.
- Password: Create a secure password. It should be at least 8 characters long.
- Confirm Password: Re-enter the same password to confirm it.

Submit the Form

- Once all fields are correctly filled, click the "Sign Up" button at the bottom.
- If everything is valid, you will be registered and redirected to the login or dashboard page.
- If you already have an account, click "Login Here" to access the login page.

Student Dashboard Guide: Applications & Profile Overview

Once logged in, students are taken to the Dashboard, which serves as the central hub for managing applications and personal profile information.

Upon login, you'll see a left-hand navigation menu and the main dashboard panel. The dashboard displays key information such as:

- Total Applications Submitted
- Offers Confirmed
- Offers Rejected

These counters help you track your progress through the TA application and assignment process.

At the top of the dashboard, your profile card displays:

- Name (e.g., *Scoobert Doobert*)
- Email (e.g., *student@test.com*)
- Student Number
- Year of Study
- Enrollment Status

To update any of this information, click the "Edit Profile" button. You'll be directed to the profile page, where you can edit fields such as your year, major, and student number.

Recent Applications

This section lists your most recent TA applications. If you haven't applied yet, it will show:

"No applications found."

Click "View All Applications" to go to the full applications page, where you can review your application history, statuses, and accept/decline offer.

Profile Questions

This section shows your responses to required profile questions, which help coordinator understand your qualifications (e.g., past experience, interests).

If you haven't answered any yet, click "Edit Profile Questions" to complete them. This is essential before starting an application.

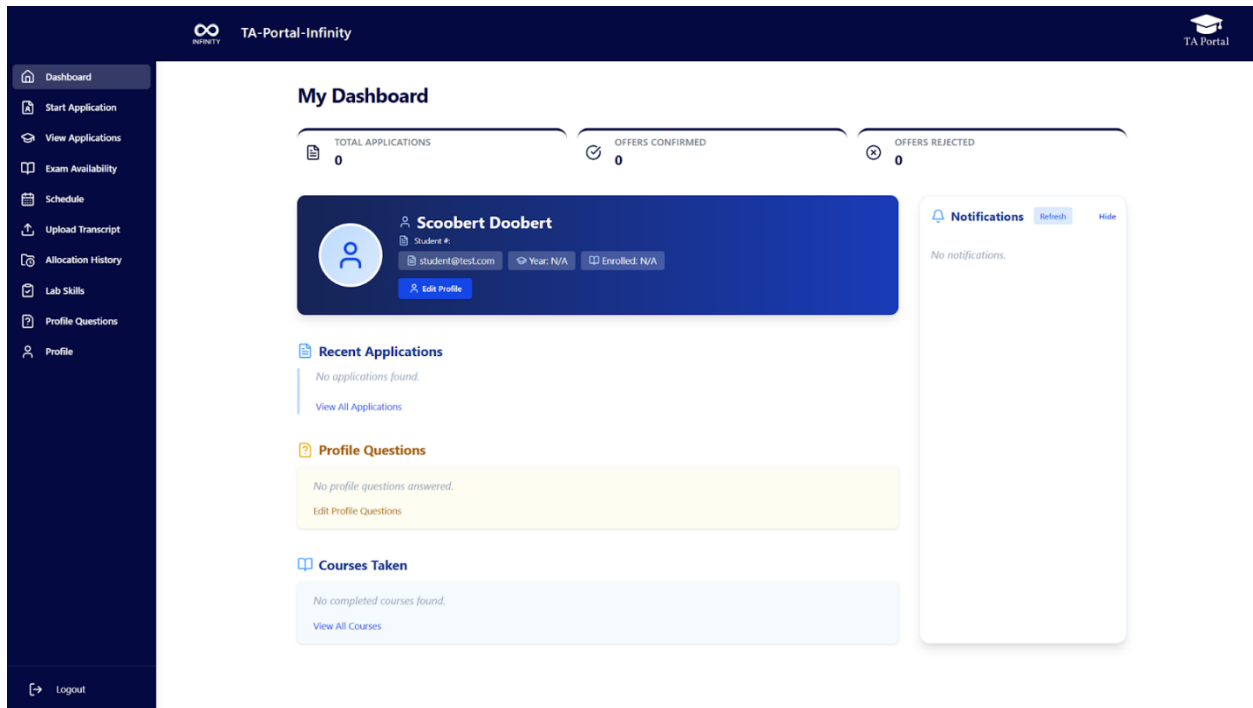

Courses Taken

The dashboard also tracks completed or previously assigned courses relevant to TA positions.

If none are listed, it will say:

“No completed courses found.”

Click “View All Courses” to manage your course history, which can influence application outcomes.

Profile completion:

- Before starting your application, please provide the following information

Profile Completion: Uploading Your Transcript:

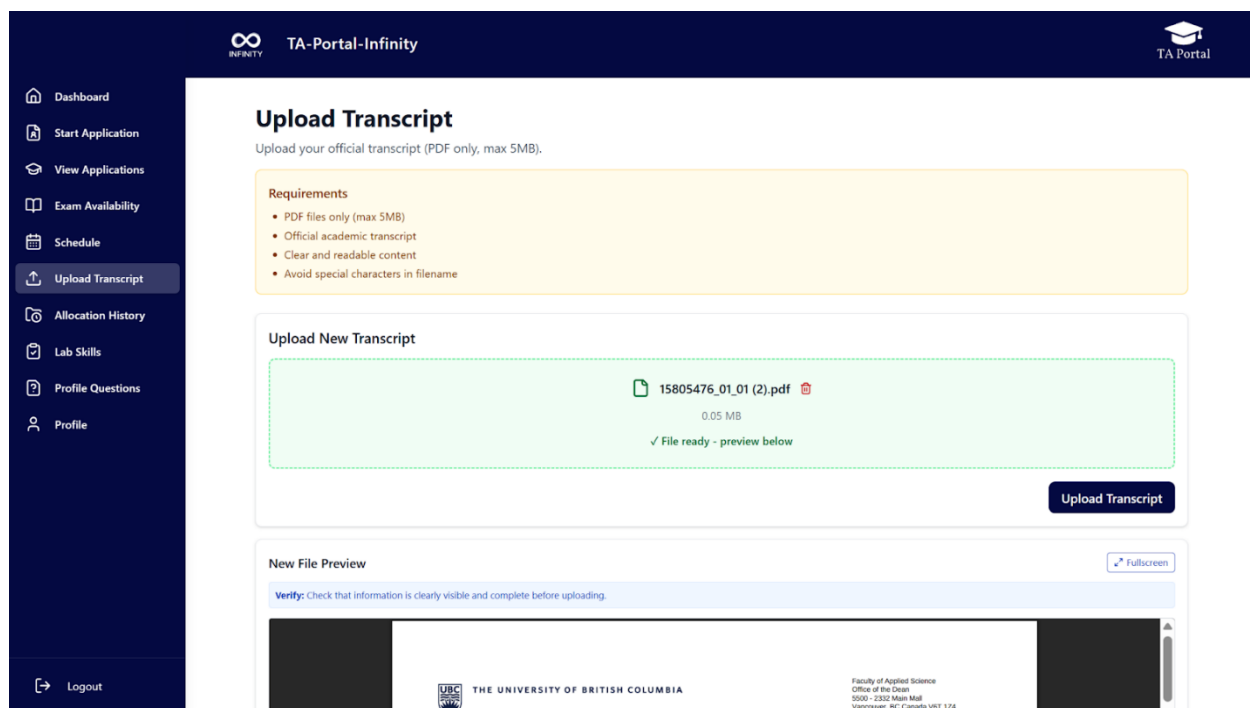

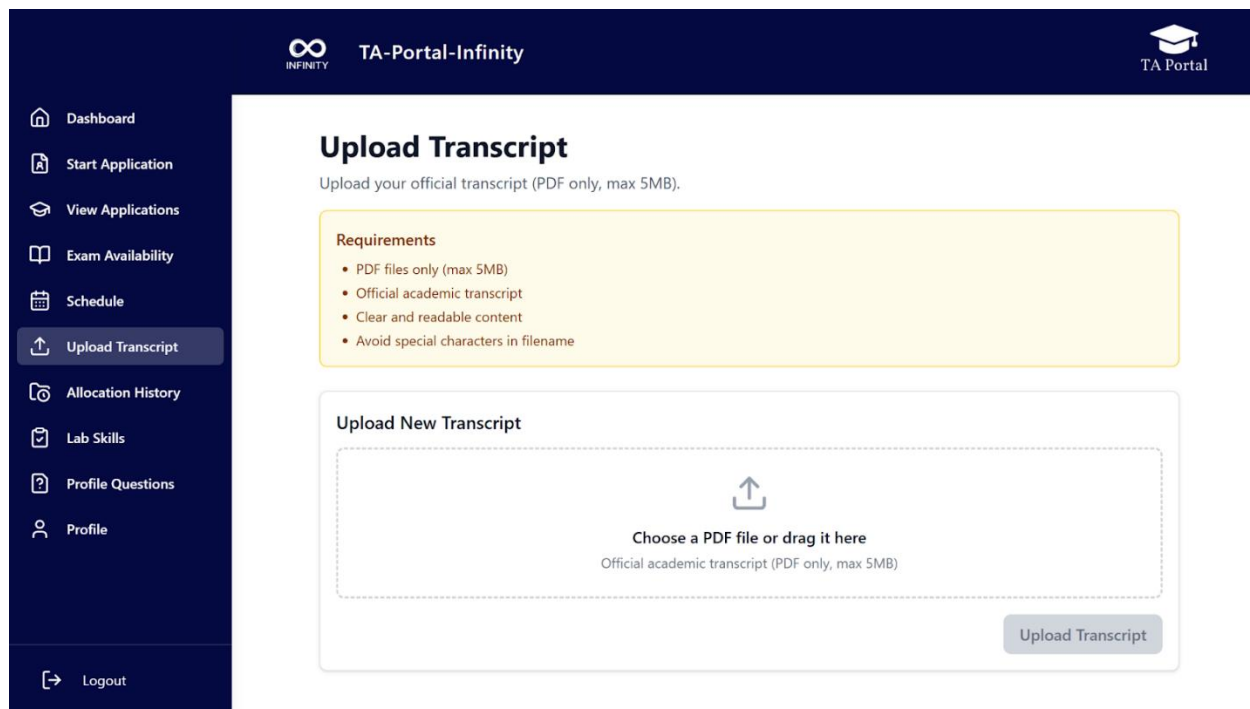

- On this page, upload your transcript
- use the left sidebar menu to click on **“Upload Transcript”**

Prepare Your File

- Ensure your transcript meets the following requirements:
 - PDF format only
 - File size must be under 5MB
 - Clear and readable content
 - Official transcript (issued by your institution)
 - Avoid special characters (e.g., #, &, %) in the filename

Upload the File

- Click on the upload box labeled **“Choose a PDF file or drag it here”**
- Select the PDF file from your computer or drag and drop it into the box
- Once uploaded, the filename will appear, and you’ll see a message:
File ready – preview below

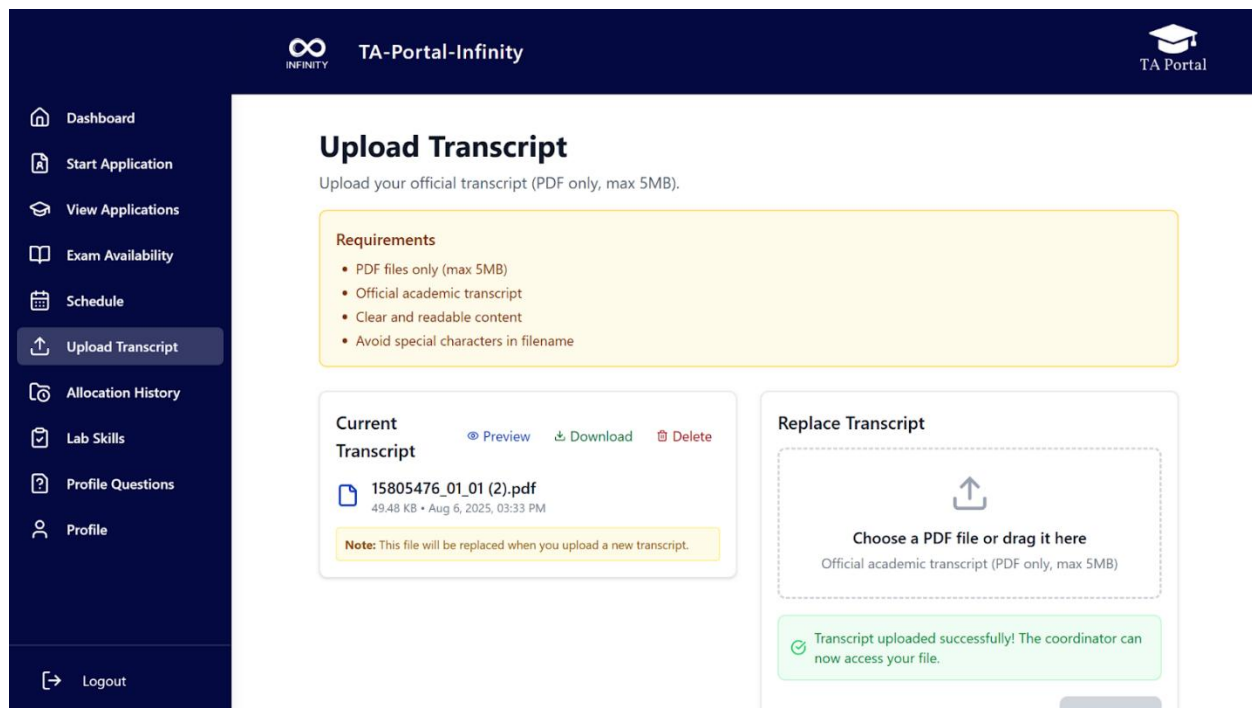

Submit

- Click the “Upload Transcript” button
- A green message will confirm:
Transcript uploaded successfully! The coordinator can now access your file.

Managing Your Transcript

- After uploading, you will see your current transcript displayed:
 - Options to Preview, Download, or Delete the file
 - You may replace the file at any time by uploading a new one; the old file will be automatically overwritten

Teaching Experience: Add Your Allocation History

The Allocation History page allows students to keep a record of their previous TA assignments. This information is crucial for instructors and coordinators to assess your qualifications for future TA roles.

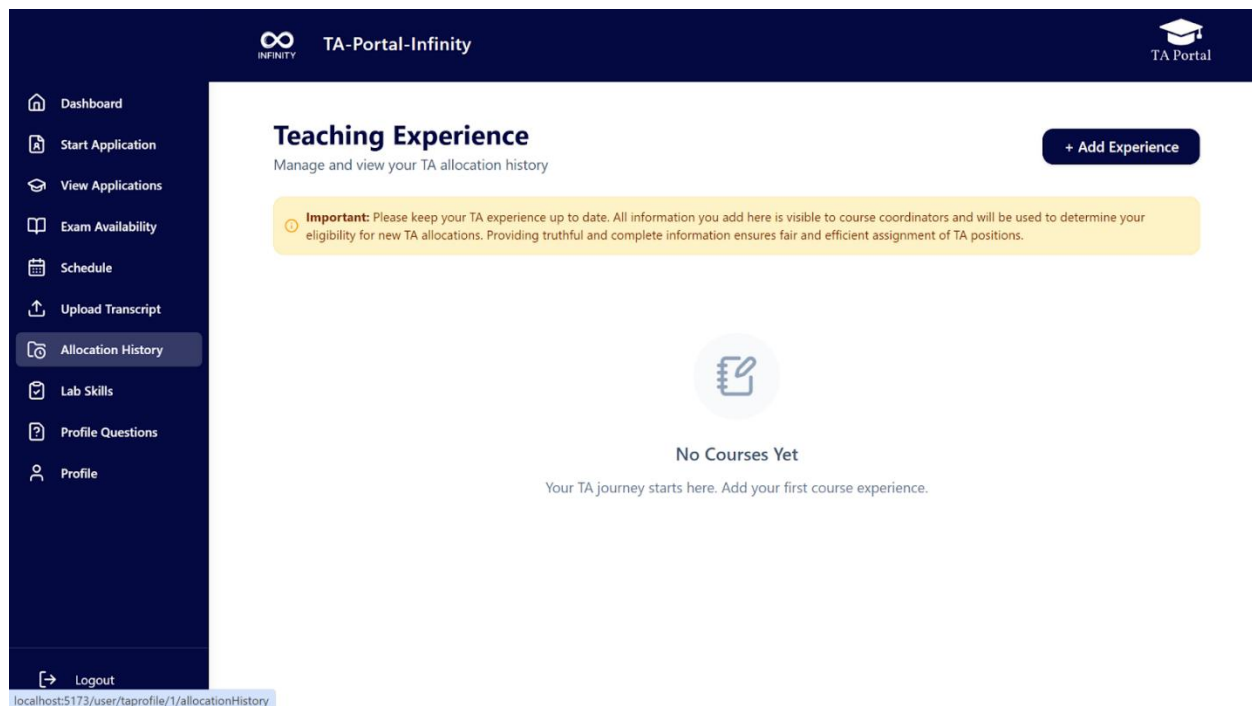

Open the Allocation History Page

- After logging in, select “Allocation History” from the left-side navigation menu.
- You will see the Teaching Experience dashboard. If you haven’t added any experience yet, it will display:

"No Courses Yet — Your TA journey starts here."

Click “+ Add Experience”

- Press the “+ Add Experience” button on the top right of the page.
- You will be taken to the Search for a Section page to begin selecting courses you've TA'ed for.

Search for Your Course

- Use the search bar and dropdowns to filter available sections:
 - Department (e.g., COSC, PHYS, MATH)
 - Course Number (e.g., 101, 499)
 - Section (e.g., 001, L01)
 - Year and Semester (W1, W2, etc.)
- You can also search directly by typing the course name, e.g., COSC 101 W1

Skills & Qualifications:

This section helps you indicate where you have technical knowledge to assist in TA roles.

Steps:

1. Click “Lab Skills” in the sidebar.
2. Select a department from the dropdown (e.g., COSC, MATH, PHYS).
3. A list of qualifications will appear (e.g., Qualification 1 for COSC 499).
4. Use the checkboxes to select the qualifications that apply to you.
5. Click “Save Qualifications” to confirm.

Skills & Qualifications

Important Notice
Select the departments and courses where you have the technical knowledge and skills to effectively assist students as a Teaching Assistant.

Department: COSC

Available Courses: COSC, MATH, PHYS

Check the box to indicate you have teaching qualifications.

SELECT	QUALIFICATION	COURSE
☐	Qualification 1 for COSC	COSC 499
☐	Qualification 2 for COSC	COSC 499
☐	Qualification 3 for COSC	COSC 499

Save Qualifications

How to Use

- Select the departments and courses where you have strong technical knowledge.
- Use the checkboxes to indicate your qualifications.
- Click 'Save Qualifications' when finished.

Tip: You can update your qualifications at any time.

Profile Questionnaire:

Coordinators use your answers to understand your preferences and availability.

Steps:

1. Navigate to “Profile Questions”.
2. Complete all questions honestly:
 - Examples:
 - Have you applied for other student positions?

- How many hours can you work per week?
- Preferences for course types or availability?

3. Click “Save Answers” when done.

The screenshot shows the TA-Portal-Infinity interface. On the left is a dark blue sidebar with navigation links: Dashboard, Start Application, View Applications, Exam Availability, Schedule, Upload Transcript, Allocation History, Lab Skills, Profile Questions (highlighted), and Profile. At the bottom of the sidebar is a Logout button. The main content area has a dark blue header with the INFINITY logo, the text 'TA-Portal-Infinity', and a 'TA Portal' logo with a graduation cap icon. Below the header, the section is titled 'Profile Questionnaire' with a subtitle 'Complete these questions to help coordinators understand your background and preferences'. A progress indicator shows '6 Total Questions'. A light blue banner reads 'Complete Your Profile' with a subtext: 'Your responses help coordinators make informed decisions about TA assignments. Please provide accurate information.' Below this, the 'Questions' section contains two items. Question 1 asks 'Have you applied, or accepted offers, for other student positions?' with radio button options for 'Yes (Please indicate how many hours per week in the next question)' (selected) and 'No'. Question 2 asks 'Please indicate the expected average number of hours per week you will be working below:' with a text input field containing the number '10'. A 'Save Answers' button is located in the top right of the questions section.

Profile: Complete Your Personal Details

Keeping your profile updated is mandatory to be considered for a TA role.

Steps:

1. Click on “Profile” from the sidebar.
2. Fill out the right-hand form under “Edit Profile”:
 - First Name & Last Name
 - Email
 - Student Number (e.g., 888888888)
 - Program (e.g., BSc, Major in CS)
 - Enrollment Year (e.g., 2022)

- School Year (e.g., 3)

3. Click “Save Changes” to update your information.

Application:

How to Submit a TA Application

1. Start Your Application

- Navigate to “Start Application” from the sidebar.
- Select the academic term(s) you want to apply for (e.g., 2025 W1).
- Once selected, the application form for that term will be shown.

2. Fill in Course Preferences

- Choose your top 3 course department preferences using the dropdowns:
 - 1st Preference: Your highest priority (e.g., COSC)
 - 2nd Preference: (e.g., MATH)
 - 3rd Preference: (e.g., PHYS)

These preferences help match you to available TA positions.

The screenshot shows the 'TA Application Submission' interface. On the left is a dark blue sidebar with navigation links: Dashboard, Start Application (highlighted), View Applications, Exam Availability, Schedule, Upload Transcript, Allocation History, Lab Skills, Profile Questions, and Profile. At the bottom of the sidebar is a 'Logout' button. The main content area has a title 'TA Application Submission' and a deadline 'Deadline: 2025/8/31 23:59:59'. Below this is a section 'Select Terms to Apply For*' with two checkboxes: '2025 W1' (checked) and '2026 W2'. A 'Selected Terms:' box shows '2025 W1' with a close icon. The next section is 'Application for 2025 W1' with the instruction 'Complete the form below for your 2025 W1 TA application.' This is followed by 'Course Preferences*' with three dropdowns: '1st Preference*' (showing 'COSC' with a dropdown menu open), '2nd Preference*' (showing 'MATH'), and '3rd Preference*' (showing 'PHYS'). The dropdown menu for the 1st preference shows options: 'Select', 'COSC' (highlighted), 'MATH', and 'PHYS'. On the right side, there is an 'Application Progress' section showing 'Terms Selected: 1' and a progress bar for '2025 W1' with the status 'Missing: Working Hours, Profile'. Below this are four boxes: 'Type' (GRADUATE), 'Remote' (Yes), 'Working Hours' (Not set), and 'Preferences' (COSC). At the bottom right, a blue box contains the text: 'You can [view your submitted TA applications](#) and check their status anytime.'

Complete the Application Form

Fill out the following fields:

- Hours Requested: Number of hours you want to work (e.g., 10)
- Application Type: Choose between Undergraduate or Graduate
- Remote Work Preference: Indicate whether you're willing to work remotely
- Profile Confirmation: Check the box to confirm your profile is up-to-date

Final Exam Availability — Graduate Students:

Graduate TAs can set their availability during the final exam period. This availability is used to assign tasks such as marking, exam preparation, or exam invigilation.

1. Navigate to the Exam Availability Tab

- On the left sidebar menu, click “Exam Availability” under the Schedule section.

2. Choose the Exam Week

- At the top of the calendar view, use the left/right arrow buttons to select the correct date range (e.g., Aug 10–16, 2025).

3. Select Your Available Time Slots

- Click and drag on the calendar to highlight your available hours (e.g., 8:30 AM to 3:00 PM).
- You can select availability across multiple days (e.g., Monday and Thursday).
- Each selected time block will be shown in a colored bar (e.g., blue or purple) and marked as “Available”.

4. Modify Availability

- To adjust an existing availability slot, click on it again and reselect or drag to resize/delete it.

5. Submit Availability

- Once you're done selecting all available times for the week, click the “Submit Availability” button at the bottom right corner.

Bulk Upload Sections

 Upload multiple sections at once using a CSV file. This is the fastest way to create multiple sections.

Import Sections from CSV

You can import multiple sections at once by uploading a CSV file (only .csv files are supported).
 To avoid formatting issues, please download and use the provided sample template.

 Download Sample CSV
Upload your CSV file

Drag a file here or click to choose

Import

Use the **Bulk Upload Tab** to upload courses through a CSV file. Click on the **Import button** to upload the courses once the CSV file is selected. You can click on the **Download Sample CSV button** to see the format required.

Use the **Create Course Tab** to create courses manually by filling the following details:

Course Creation

Create a new course for the system. If the course already exists, use the section creation tab instead.

Dept Code *
e.g. COSC

Course Num *
e.g. 499

Course Name *
e.g. Introduction to Computer Science

Create Course Cancel

Click the **Create Course button** once complete.

Use the **Create Section Tab** to create a section manually for a pre-existing course. This is the form:

Add a section to an existing course. Make sure the course already exists before adding a section.

Some fields are optional and can be edited later.

Dept Code *
-- Select Dept Code --

Course Num *
Please select Dept Code first

Section Code *
e.g. L01 or D01

Year *
e.g. 2025

Semester *
Select...

Section Type *
Select...

Instructor ID
Search for an instructor and click SELECT. Leave empty if not needed.

You can filter the sections displayed in the table using the filters at the top.

Click on the **Select All button** to select all sections from the table. Click on **Clear Selection button** to remove all selections.

You can also manually select the sections you require to be exported using the **Select button** next to the sections in the table.

Click on the **Export Selected button** to export selected sections to a CSV file.

Click on the **Export All Sections button** to export all sections in the table to a CSV file.

- Click on the **Import CSV button** to import sections from a CSV file. This will open a modal like so:

Import Sections from CSV

×

You can import multiple sections at once by uploading a CSV file (only .csv files are supported).
To avoid formatting issues, please download and use the provided sample template.

Download the sample CSV

Download Sample CSV

Upload your CSV file

↑

Drag a file here or click to choose

Import

Click the **Download Sample Csv button** to view the format required. After uploading the file, click on the **Import button** to import the sections.

- Click on the **Import Alloc. button** to import previous allocations. This will open a modal like so:

Import Past Allocations

Select CSV File

Choose File no file selected

Please ensure Excel does not automatically remove leading zeroes (e.g. 001 may become 1). This can cause the import to fail.

☐ Create new courses or sections if they don't exist.

Cancel

Upon selecting your CSV file, if successful, you will receive a success message. If not successful, you will receive steps on how to fix the error.

Click the **Cancel button** should you wish to navigate back.

Instructor:

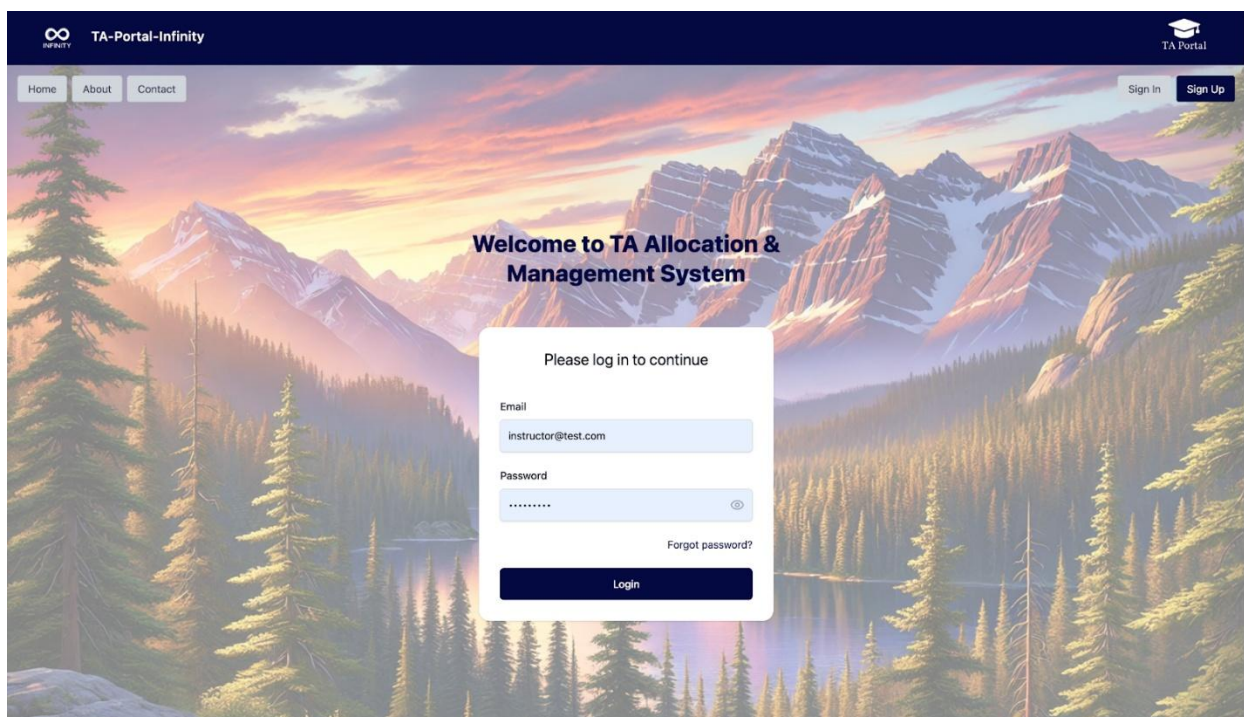

1. Sign up / Login Page

You can sign up with Name, Email, Role (Instructor), and Password.

The image shows the sign-up page of the TA Portal. The background is a scenic landscape with mountains and a forest. The page has a dark blue header with the 'TA-Portal-Infinity' logo and navigation links (Home, About, Contact). A central white form titled 'TA Portal' and 'Efficient TA Allocation Made Easy' contains the following fields: First Name* (Instructor), Last Name* (Test), Email* (instructor2025@test.com), Role* (Instructor), Password* (masked with dots), and Confirm Password* (masked with dots). There are 'Sign In' and 'Sign Up' buttons in the top right corner, and a 'Sign Up' button at the bottom of the form.

You can login with your instructor account.

The image shows the login page of the TA Portal. The background is the same scenic landscape. The page has a dark blue header with the 'TA-Portal-Infinity' logo and navigation links (Home, About, Contact). A central white form titled 'Welcome to TA Allocation & Management System' contains the following fields: Email (instructor@test.com) and Password (masked with dots). There is a 'Forgot password?' link and a 'Login' button at the bottom of the form. 'Sign In' and 'Sign Up' buttons are also present in the top right corner.

2. Instructor Dashboard Page

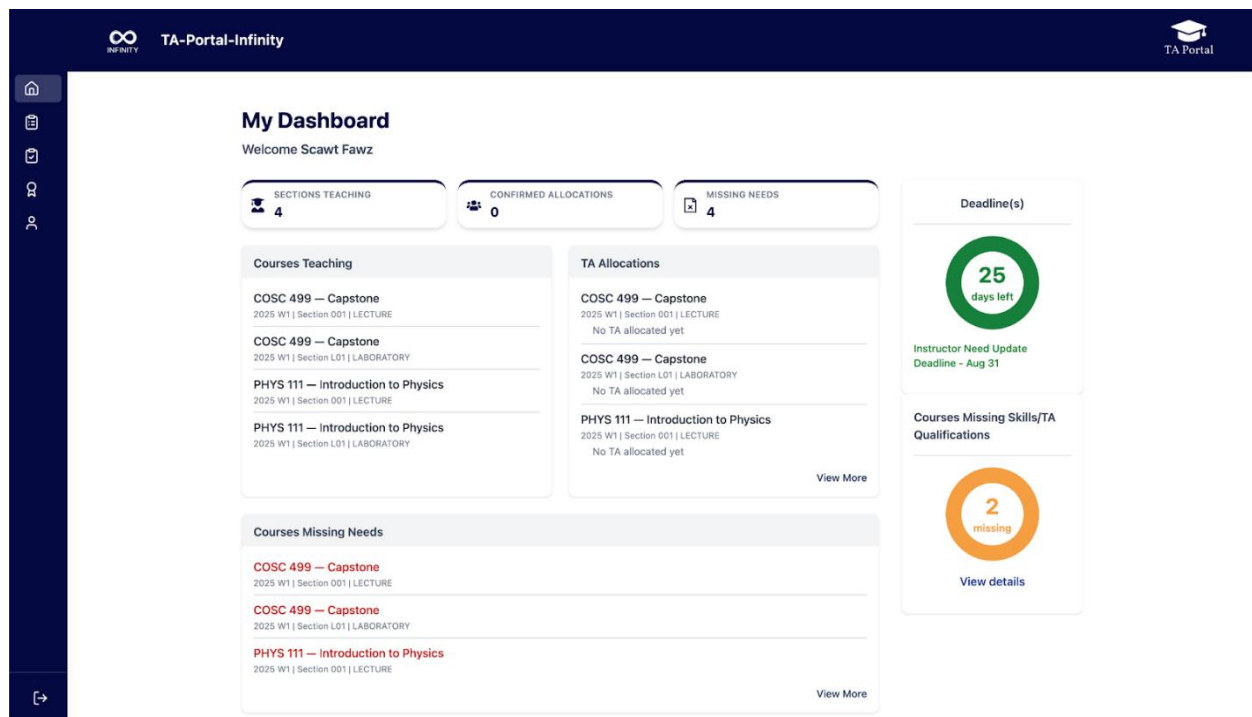

Cards on the page show your current responsibilities such as deadlines, assigned sections, confirmed TA allocations, and action items.

Use the Deadlines card to review key dates for the current term. Update each page with required information before the due date.

The Courses and Sections card lists the courses and sections you are responsible for.

The TA Allocations card shows a summary of allocations that are CONFIRMED.

The Missing Information card labeled Needs and Qualifications highlights incomplete items. Follow the links to the relevant pages.

3. Sections & Requirements Page

Define and update TA needs for each section you teach.

Use the Year/Term and Course filters to load your sections.

From each section's card, you can view the section details, can edit TA requirements, and can view the TA's profile

Update before the Dashboard deadline.

The page shows a card for each section. Each card lists students with CONFIRMED allocations.

Use the Export CSV button at the top right or near the list to download a CSV of the current view.

Use the Export PDF button to export the current list as a PDF.

If no allocations exist an empty state appears such as No students allocated.

Note. This page shows only CONFIRMED allocations. Offers or pending items are not included.

8. Additional Notes for instructors

Before You Begin:

- Your account must have the **Instructor** role.
- If no course or section is assigned to you, the list will be empty.

Empty/Error States:

- When no data matches, an empty state such as “No confirmed TAs” is shown.
- On an error, a toast or banner prompts you to retry. Reloading the browser may resolve it.

Troubleshooting:

- **Nothing appears** – check the Year, Term, and Course filters, then run Search.
- **Export will not download** – check your browser pop-up / download permissions.
- **Deadlines are missing** – the coordinator may not have set Terms and Deadlines.
- **Your courses are missing** – confirm with an administrator that your Instructor role and course assignments are in place.

Known Limitations:

- All views, totals, and exports are limited to **CONFIRMED** allocations.
 - PDF output can vary in page UI such as margins and page breaks by browser or operating system.
-
